

Configure Vcenter resource pool and Manage it-24

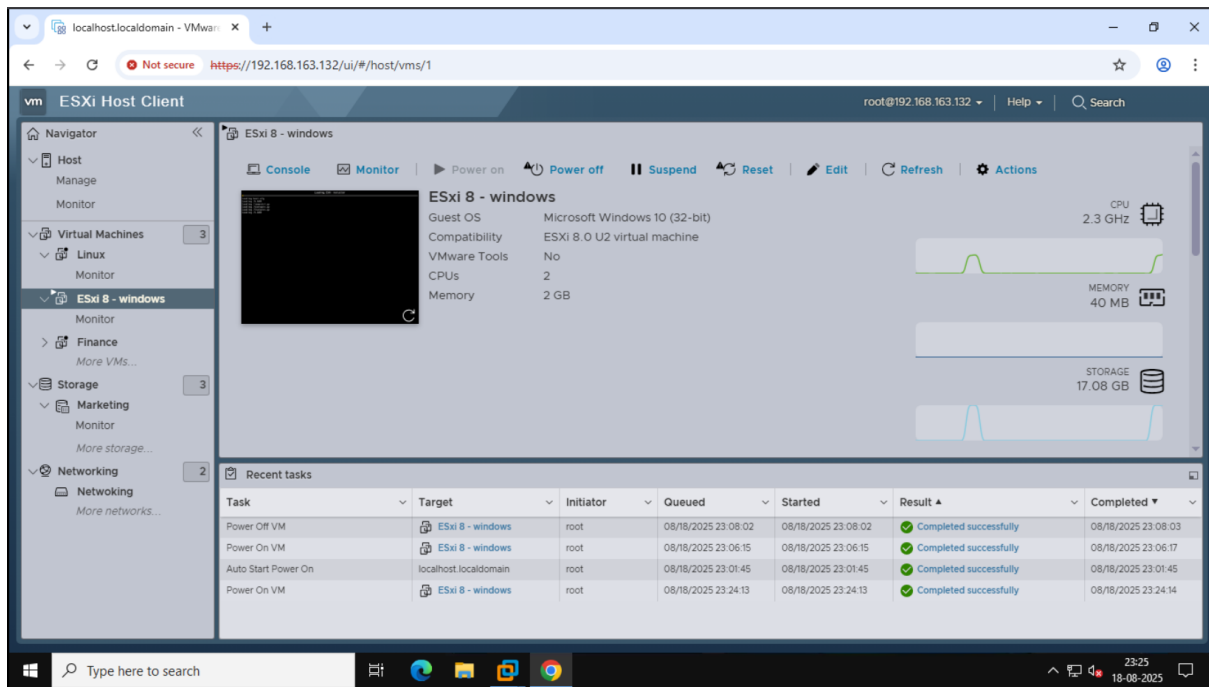

Connect ESXi Host to vCenter(Here we need to have license for it)

- Open the **vSphere Web Client** (from your vCenter Server).
- Login with your **vCenter credentials**.
- Navigate to **Hosts and Clusters**.
- Right-click on your **Datacenter** → select **Add Host**.
- Enter your ESXi host IP (example: 192.168.163.132).
- Provide root username and password.
- Finish the wizard to add your host.

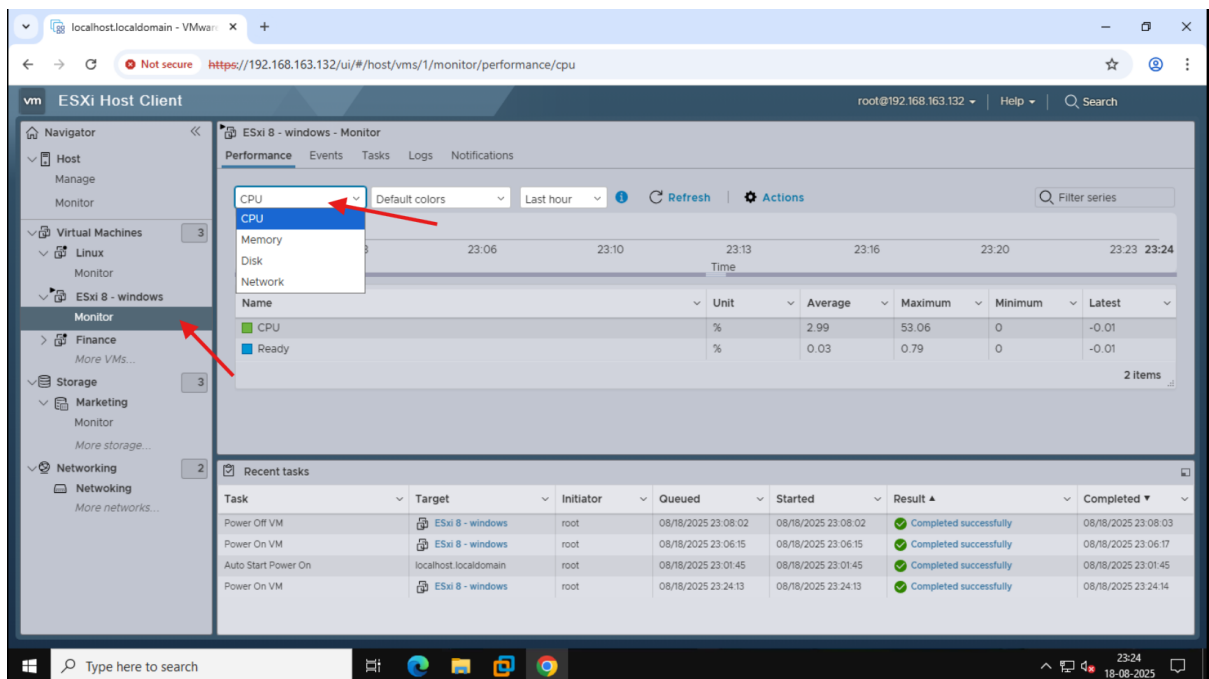

Manage Resource Pool

- Drag and drop VMs (like Finance, Linux, or Marketing VMs) into the created resource pool.
- Adjust CPU/Memory shares as needed.
- Monitor resource usage by selecting the pool → **Monitor tab**.

Here in the monitor tab we can see performance,events,tasks etc

localhost.localdomain - VMware | +

And like wise we can edit the memory and storage and other features from here.

The screenshot shows the 'ESXi Host Client' interface. The left sidebar contains a 'Navigator' with sections for 'Host', 'Virtual Machines', 'Storage', 'Marketing', and 'Networking'. The main area displays the 'ESXi 8 - windows - Monitor' page, which is identical to the one in the previous screenshot. The 'Actions' menu is open, showing a list of options: 'ESXi 8 - windows', 'Power', 'Guest OS', 'Snapshots', 'Autostart', 'Upgrade VM Compatibility', 'Export', 'Export With Images', 'Edit settings', 'Permissions', 'Edit notes', 'Rename', 'Answer question', 'Unregister', 'Delete', 'Help', and 'Open VM in new window'. The 'Edit settings' option is highlighted.

We are able to manage VM settings in resource pool.
