Preparing installation...

Wait it will take time

Give the client name and the host needed

COMMVAULT

Client Computer Information

Client Name

Select an interface name that the CommServe will use to communicate with this computer

Host Name

IP Address(es) for the selected host.

You can select either of them

COMMVAULT

Firewall Configuration

You selected not to configure Firewall settings. However, setup detected that Firewall may be enabled for the following profiles:

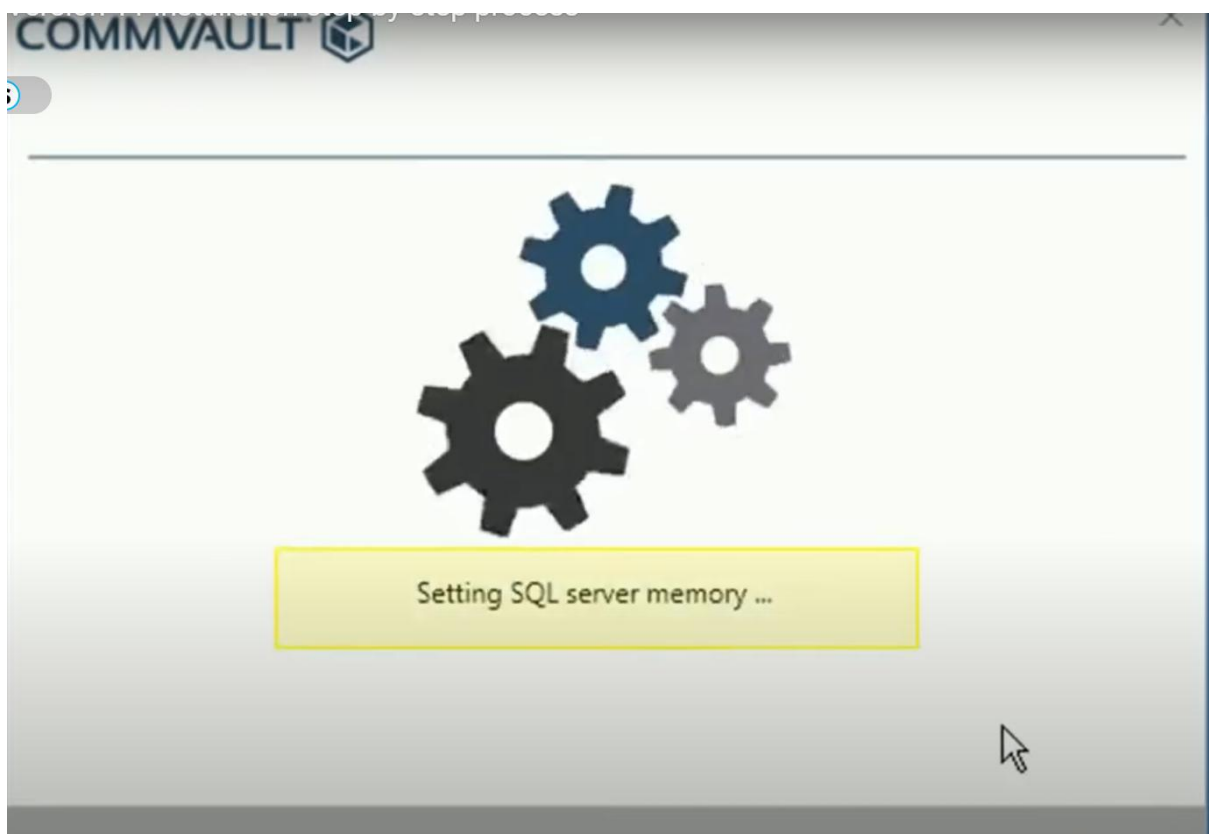

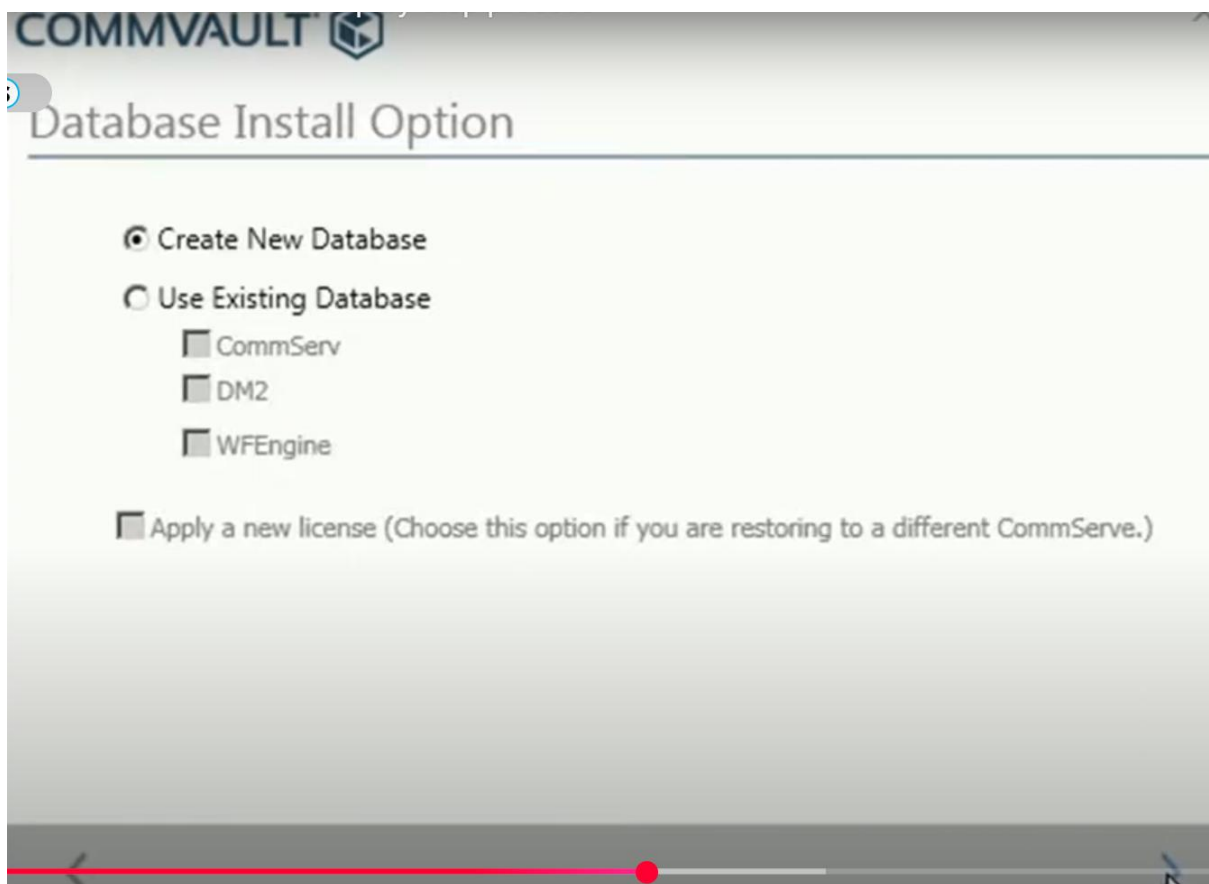

Public Profile, Domain Profile, Private Profile

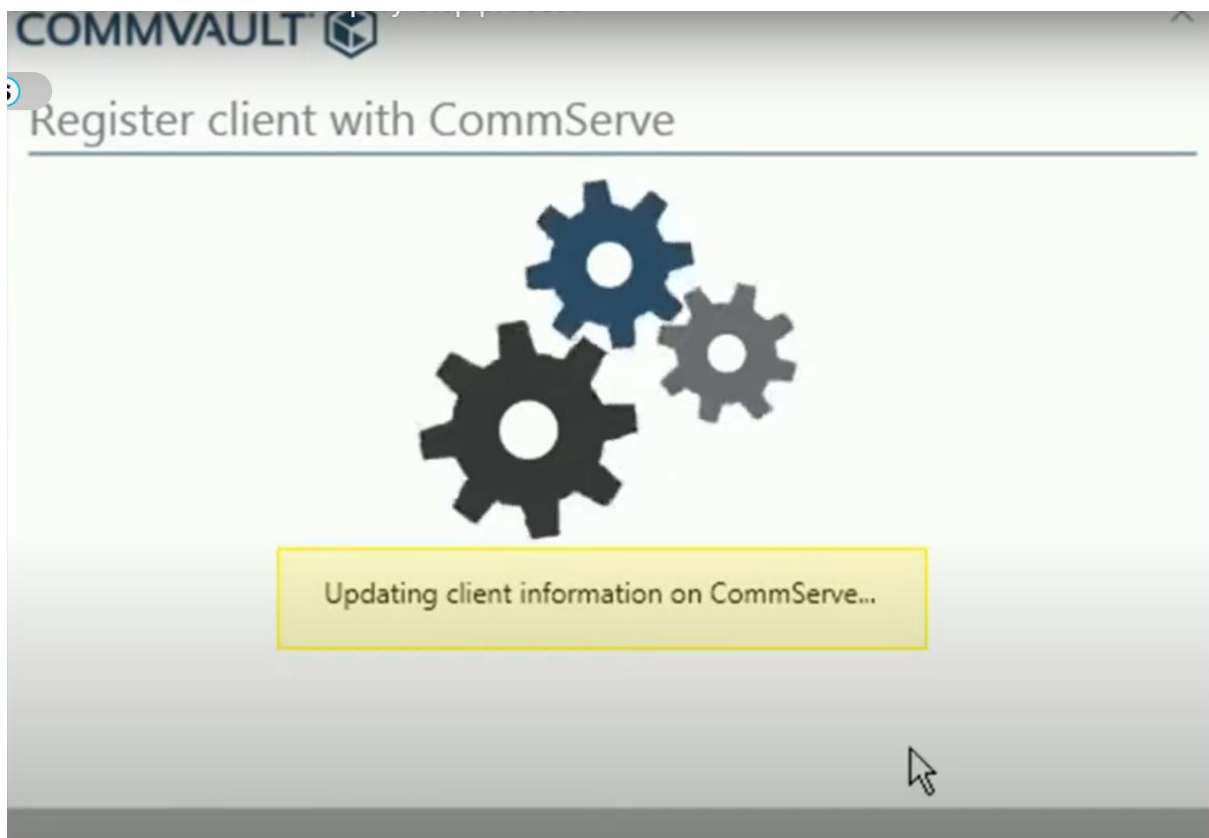

Do you want setup to disable Firewall for ALL Profiles?

☐ Yes, Disable Firewall for ALL Profiles.

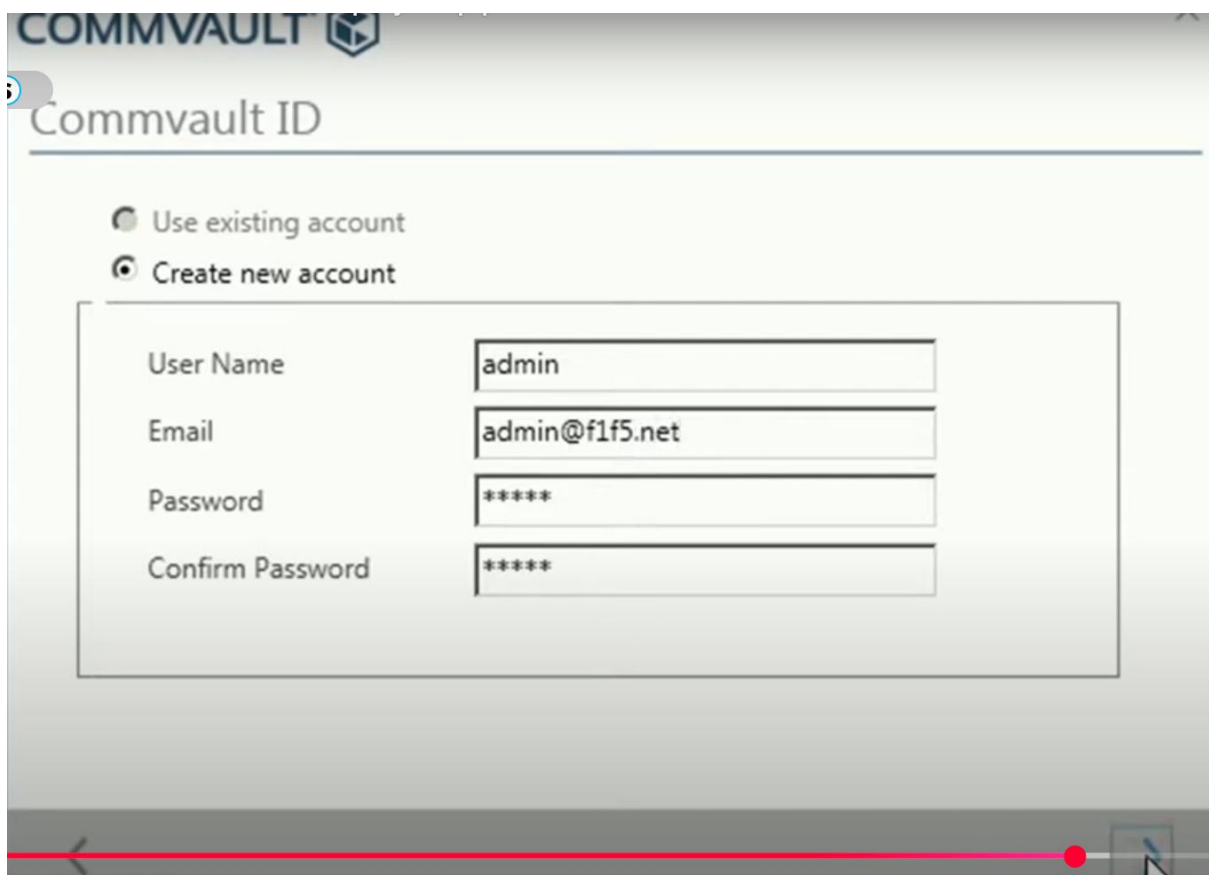

☒ No, Don't disable Firewall profile if it is enabled.

Create new database or if you have you can use that for now we'll go with create new

Give mane and email with strong password only

COMMVAULT

Commvault ID

☐ Use existing account

☒ Create new account

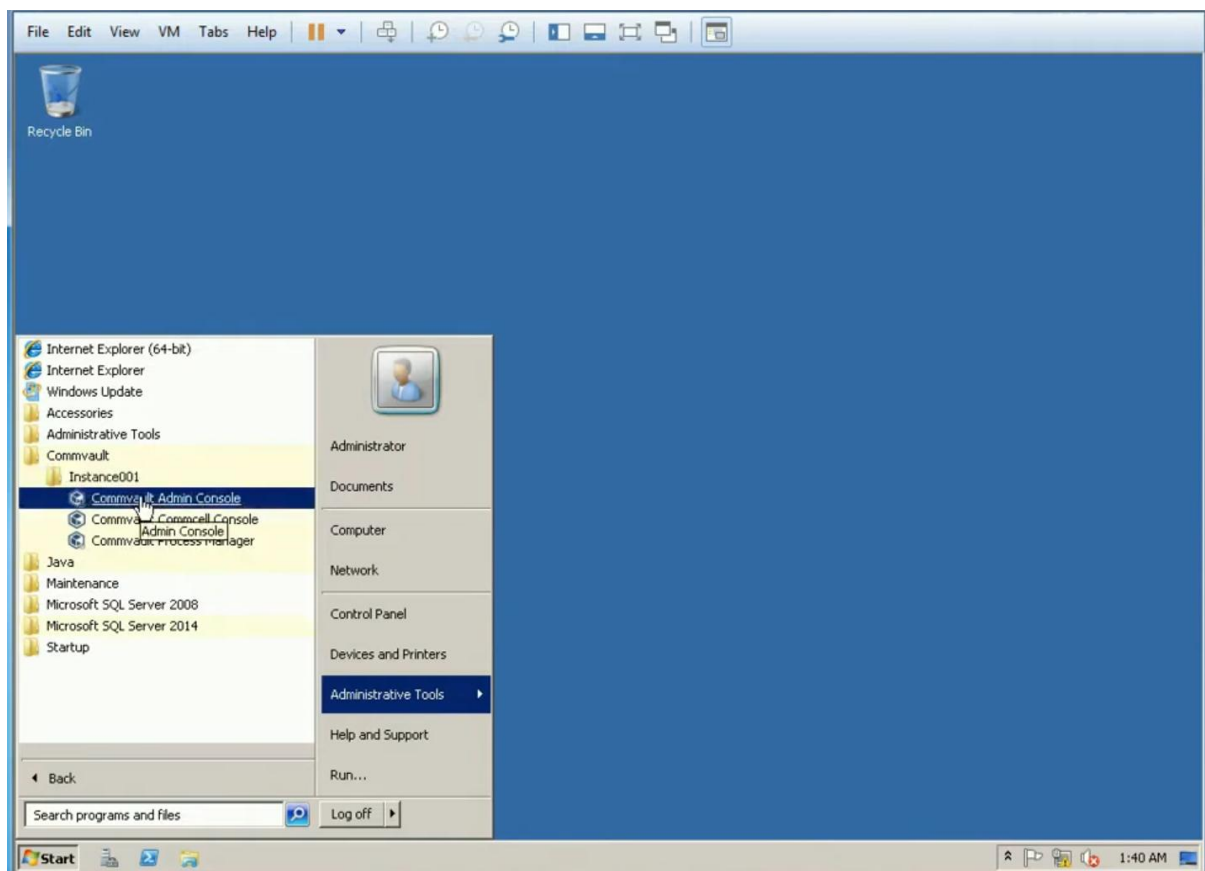

User Name	admin
Email	admin@f1f5.net
Password	*****
Confirm Password	*****

This screenshot shows the 'Commvault ID' creation screen. The title bar at the top reads 'COMMVAULT'. Below the title, the main heading is 'Commvault ID'. There are two radio buttons: 'Use existing account' (unselected) and 'Create new account' (selected). Below these, there is a form with four fields: 'User Name' (containing 'admin'), 'Email' (containing 'admin@f1f5.net'), 'Password' (containing '*****'), and 'Confirm Password' (containing '*****'). A red progress bar is visible at the bottom of the window.

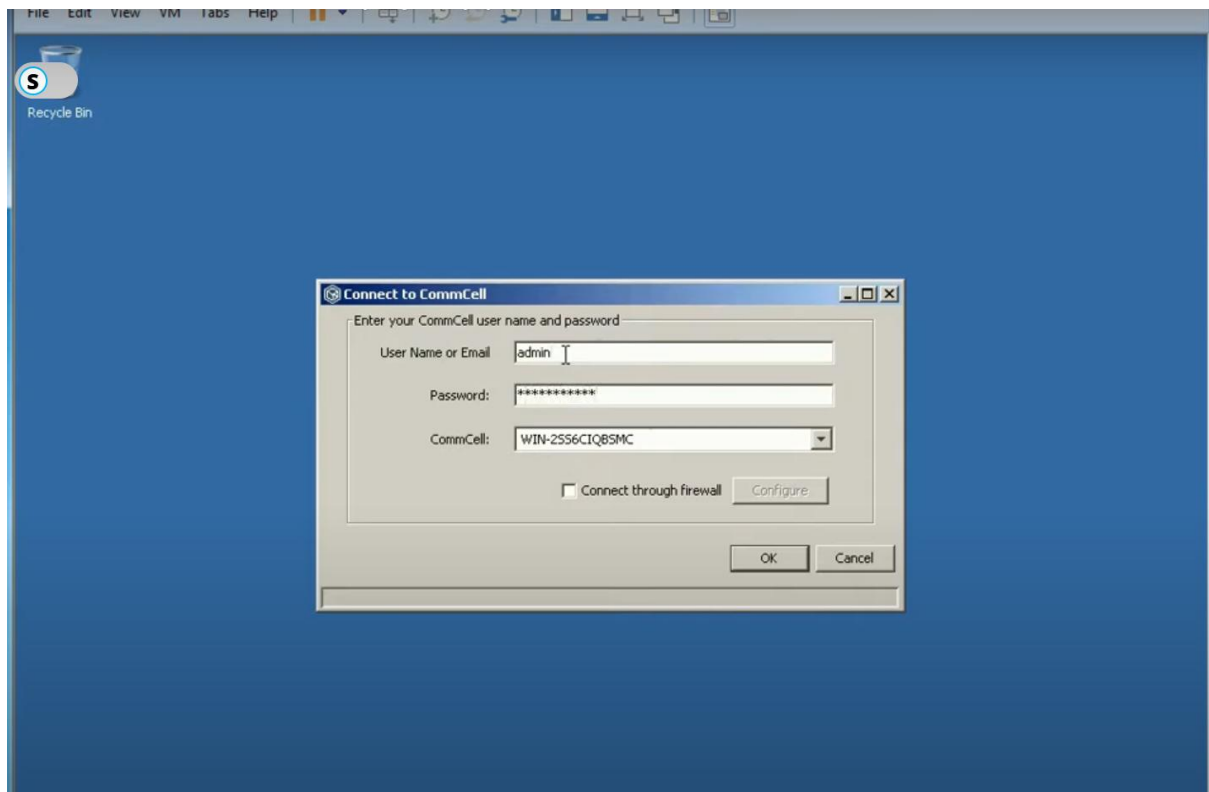

After clicking next you'll see the installation is complete click on finish

Now open the Commvault commcell console from the start menu

Give the credentials from earlier click ok

So this is the installation of Commvault
