

Create a Static HTML web app by using Azure cloud shell-77

Open the link on browser

<https://learn.microsoft.com/en-us/training/modules/introduction-to-azure-app-service/7-create-html-web-app>

The screenshot shows the Microsoft Learn interface. At the top, there's a navigation bar with the Microsoft logo and the word 'Learn'. Below it, there are tabs for 'Documentation', 'Training', 'Q&A', and 'Topics'. The 'Training' tab is selected. Under 'Training', there are links for 'Products', 'Career Paths', 'Browse all training', 'Learn for Organizations', and 'Educator Center'. The breadcrumb trail shows the path: 'Training / Browse / Implement Azure App Service web apps / Explore Azure App Service'. The current unit is 'Unit 7 of 9'. A green badge indicates '100 XP' earned. The main heading is 'Exercise: Create a static HTML web app by using Azure Cloud Shell', with a duration of '15 minutes'. Below the heading, there's a section titled 'Verify your account' which contains a placeholder for a puzzle to verify the user is a real person.

Please solve this puzzle so we know you are a real person

The screenshot shows the Microsoft Learn interface for a training exercise. The top navigation bar includes 'Learn', 'Documentation', 'Training', 'Q&A', and 'Topics'. Below this, a secondary bar shows 'Training', 'Products', 'Career Paths', 'Browse all training', 'Learn for Organizations', and 'Educator Center'. The exercise title is 'Exercise: Create a static HTML web app by using Azure Cloud Shell', with a duration of '15 minutes' and a progress indicator showing '98% Creating file share...'. A list of Azure regions is provided for selection: West US 2, South Central US, Central US, East US, West Europe, Southeast Asia, Japan East, Brazil South, Australia Southeast, and Central India. The text explains that the free sandbox allows creating resources in a subset of Azure global regions and that the exercise involves deploying a basic HTML+CSS site to Azure App Service using the Azure CLI `az webapp up` command.

Unit 7 of 9 Ask Learn 100 XP

Exercise: Create a static HTML web app by using Azure Cloud Shell

15 minutes

98% Creating file share...

The free sandbox allows you to create resources in a subset of the Azure global regions. Select a region from the following list when you create resources:

- West US 2
- South Central US
- Central US
- East US
- West Europe
- Southeast Asia
- Japan East
- Brazil South
- Australia Southeast
- Central India

In this exercise, you deploy a basic HTML+CSS site to Azure App Service by using the Azure CLI `az webapp up` command. Next, you update the code and redeploy it by using the same

Select no storage if you want and select a subscription and apply

This screenshot shows the 'Getting started' dialog box within the Azure Cloud Shell interface. The dialog prompts the user to select a subscription and whether to mount a storage account. The 'No storage account required' option is selected. The 'Subscription' dropdown menu is set to 'Concierge Subscription'. There are 'Apply' and 'Previous' buttons at the bottom of the dialog. The background shows the same exercise content as the first screenshot, but it is partially obscured by the dialog box.

Unit 7 of 9 Ask Learn

You have used 2 of 10 sandboxes for today. More sandboxes will be available tomorrow.

The free sandbox allows you to create resources in a subset of the Azure global regions. Select a region from the following list when you create resources:

- West US 2
- South Central US
- Central US
- East US
- West Europe
- Southeast Asia
- Japan East
- Brazil South
- Australia Southeast
- Central India

In this exercise, you deploy a basic HTML+CSS site to Azure App Service by using the Azure CLI `az webapp up` command. Next, you update the code and redeploy it by using the same command.

The `az webapp up` command makes it easy to create and update web apps. When executed, it performs the following actions:

- Create a default resource group if one isn't specified.
- Create a default app service plan.
- Create an app with the specified name.
- Zip deploy files from the current working directory to the web app.

Getting started

Select a subscription to get started. You can optionally mount a storage account to persist files between sessions. [Learn more](#)

☒ No storage account required [?](#)

☐ Mount storage account [?](#)

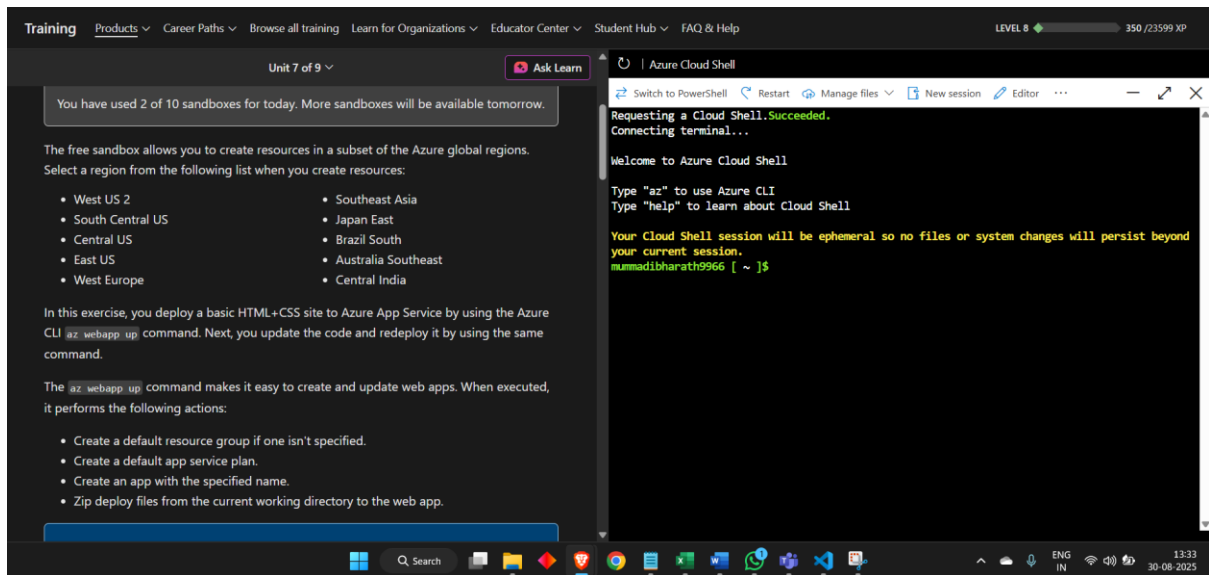

Subscription *

Concierge Subscription

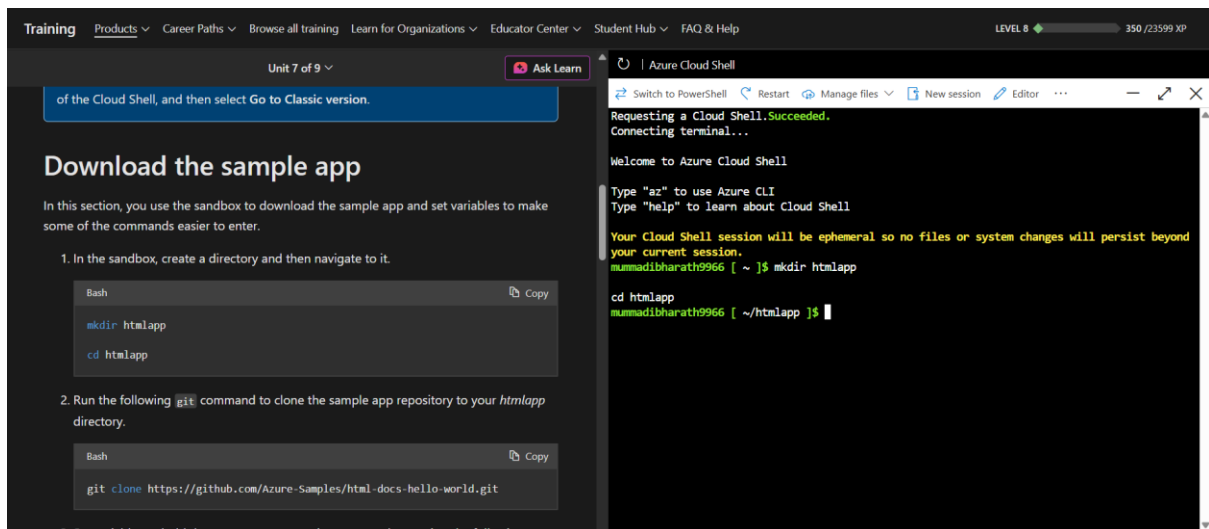

☐ Use an existing private virtual network [Learn more](#)

Apply Previous

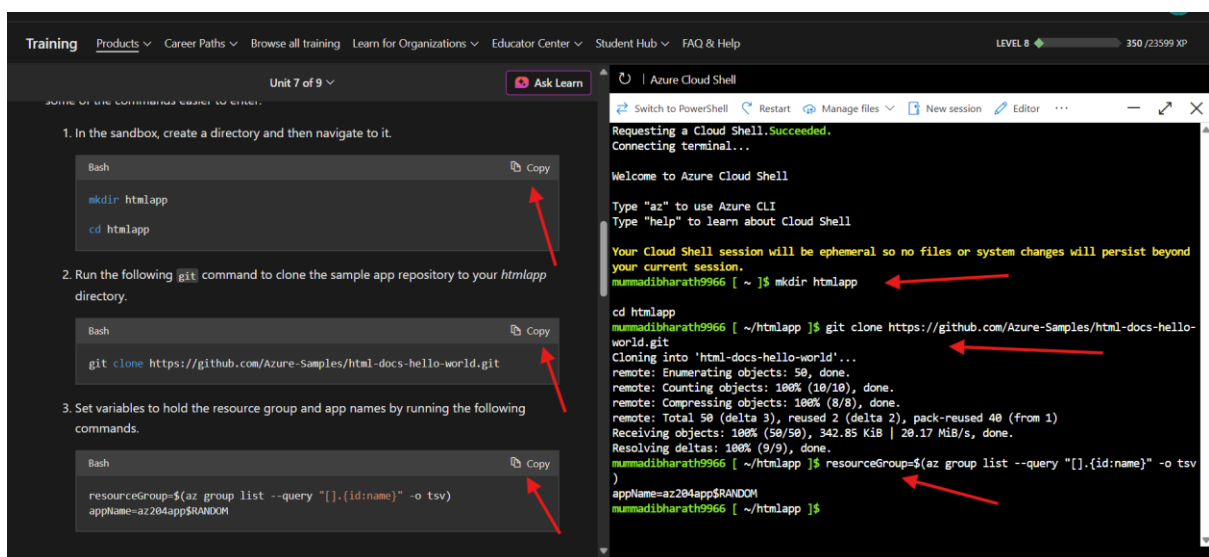

The Azure Cloud Shell interface is opened in the browser.

Here make a htmlapp folder and move to that directory

Now copy commands on the right and paste it line by line

Here we are bundling up files in the cli for setting the variables

Unit 7 of 9

Bash

```
cd html-docs-hello-world
az webapp up -g $resourceGroup -n $appName --html
```

This command might take a few minutes to run. While the command is running, it displays information similar to the following example.

```
{
  "app_url": "https://myAppName.azurewebsites.net",
  "location": "westeurope",
  "name": "capp_name",
  "os": "Windows",
  "resourcegroup": "cresource_group_name",
  "serverfarm": "appsvc_asp_windows_westeurope",
  "sku": "FREE",
  "src_path": "/home/<username>/demoHTML/html-docs-hello-world ",
  "src_path": "/home/<username>/demoHTML/html-docs-hello-world ",
  "src_path": "/home/<username>/demoHTML/html-docs-hello-world "
}
```

2. Open a new tab in your browser and navigate to the app URL

Azure Cloud Shell

```
Switch to PowerShell Restart Manage files New session Editor
mummadibharath9966 [ ~/htmlapp ]$ cd html-docs-hello-world
az webapp up -g $resourceGroup -n $appName --html
The webapp 'az204app11145' doesn't exist
Creating AppServicePlan 'mummadibharath9966_asp_0296' or Updating if already exists
Creating webapp 'az204app11145' ...
Configuring default logging for the app, if not already enabled
Getting zip with contents of dir /home/mummadibharath9966/htmlapp/html-docs-hello-world ...
Getting scm site credentials for zip deployment
Starting zip deployment. This operation can take a while to complete ...
Deployment endpoint responded with status code 202
Polling the status of async deployment. Start Time: 2025-08-30 08:05:38.389146+00:00 UTC
You can launch the app at http://az204app11145.azurewebsites.net
Setting 'az webapp up' default arguments for current directory. Manage defaults with 'az config
figure --scope local'
--resource-group/-g default: learn-bf54788d-5ea0-45b5-be8d-6806b04b126f
--sku default: F1
--plan/-p default: mummadibharath9966_asp_0296
--location/-l default: canadacentral
--name/-n default: az204app11145
{
  "URL": "http://az204app11145.azurewebsites.net",
  "appserviceplan": "mummadibharath9966_asp_0296",
  "location": "canadacentral",
  "name": "az204app11145",
  "os": "Windows",
  "resourcegroup": "learn-bf54788d-5ea0-45b5-be8d-6806b04b126f",
  "runtime_version": "-",
  "runtime_version_detected": "-",
  "sku": "FREE",
  "src_path": "/home/mummadibharath9966/htmlapp/html-docs-hello-world"
}
```

After that you will get a JSON component in that a URL object will be their copy that url

```
{
  "URL": "http://az204app11145.azurewebsites.net",
  "appserviceplan": "mummadibharath9966_asp_0296",
  "location": "canadacentral",
  "name": "az204app11145",
  "os": "Windows",
  "resourcegroup": "learn-bf54788d-5ea0-45b5-be8d-6806b04b126f",
  "runtime_version": "-",
  "runtime_version_detected": "-",
  "sku": "FREE",
  "src_path": "/home/mummadibharath9966/htmlapp/html-docs-hello-world"
}
```

mummadibharath9966 [~/htmlapp/html-docs-hello-world]\$

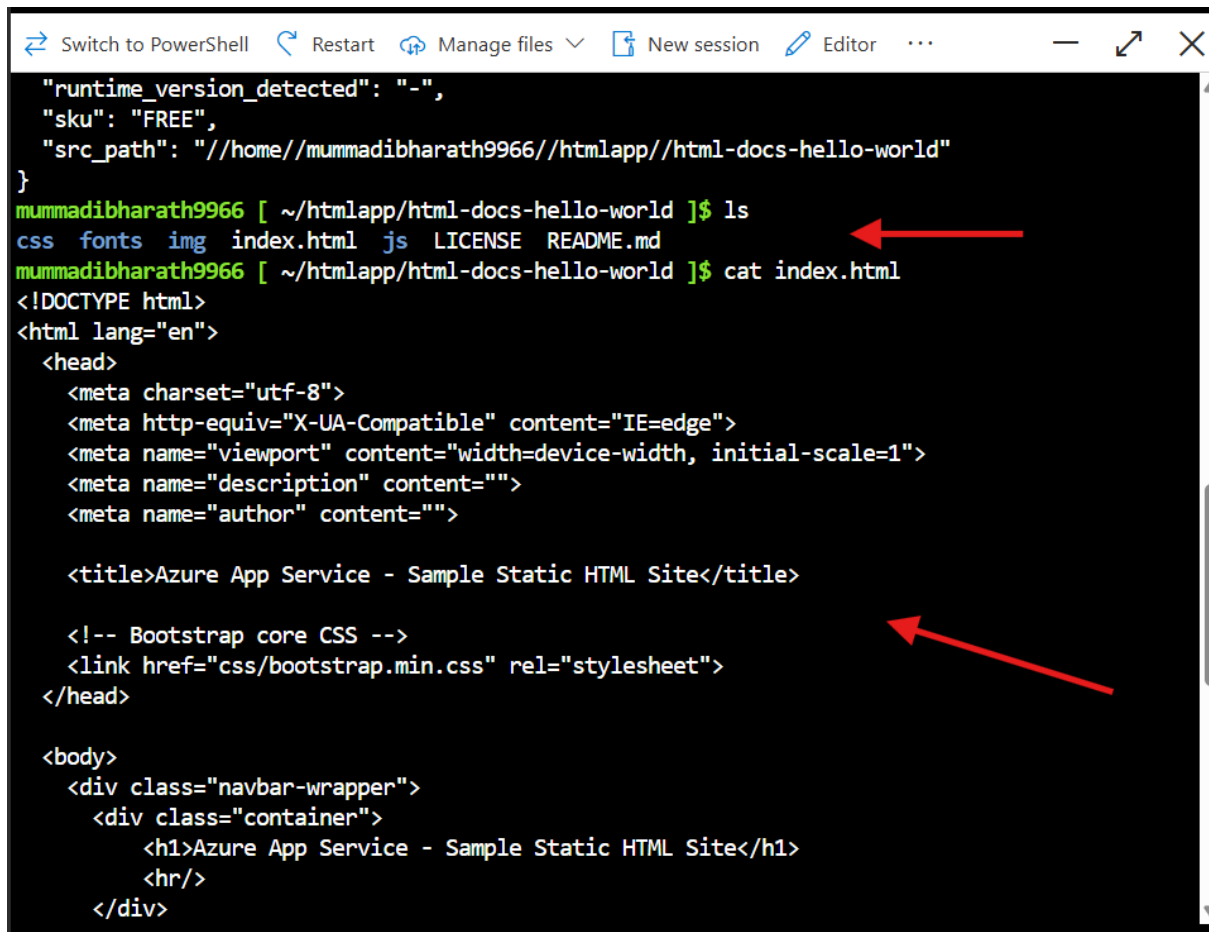

Open that URL on the browser your htmlapp will be live and running with demo html code

Azure App Service - Sample Static HTML Site

Azure App Service Web Apps

App Service Web Apps is a fully managed compute platform that is optimized for hosting websites and web applications. This platform-as-a-service (PaaS) offering of Microsoft Azure lets you focus on your business logic while Azure takes care of the infrastructure to run and scale your apps.

Now go back to the browser shell and use ls to view contents and if you want you can make changes in the code with command code index.html or vim index.html

The screenshot shows a VS Code terminal window with a dark theme. The terminal output is as follows:

```
Switch to PowerShell Restart Manage files New session Editor ...
"runtime_version_detected": "-",
"sku": "FREE",
"src_path": "//home//mummadibharath9966//htmlapp//html-docs-hello-world"
}
mummadibharath9966 [ ~/htmlapp/html-docs-hello-world ]$ ls
css  fonts  img  index.html  js  LICENSE  README.md
mummadibharath9966 [ ~/htmlapp/html-docs-hello-world ]$ cat index.html
<!DOCTYPE html>
<html lang="en">
  <head>
    <meta charset="utf-8">
    <meta http-equiv="X-UA-Compatible" content="IE=edge">
    <meta name="viewport" content="width=device-width, initial-scale=1">
    <meta name="description" content="">
    <meta name="author" content="">

    <title>Azure App Service - Sample Static HTML Site</title>

    <!-- Bootstrap core CSS -->
    <link href="css/bootstrap.min.css" rel="stylesheet">
  </head>

  <body>
    <div class="navbar-wrapper">
      <div class="container">
        <h1>Azure App Service - Sample Static HTML Site</h1>
        <hr/>
      </div>
    </div>
```

Two red arrows are present in the image: one points to the file listing output of the `ls` command, and the other points to the `<link href="css/bootstrap.min.css" rel="stylesheet">` line in the HTML code.
