Continuous deployment settings

Set up continuous deployment to easily deploy code from your GitHub repository via GitHub Actions. [Learn more](#)

Continuous deployment ☒ Disable ☐ Enable

You do not have the permissions to set up GitHub Actions using managed identity authentication during app creation. If you are not able to use basic authentication, please create your app first before setting up GitHub Actions. Click to learn more.

GitHub settings

Set up GitHub Actions to push content to your app whenever there are code changes made to your repository. Note: Your GitHub account must have write access to the selected repository in order to add a workflow file which manages deployments to your app.

Create Web App ...

Basics Database Deployment **Networking** Monitor + secure Tags Review + create

Web Apps can be provisioned with the inbound address being public to the internet or isolated to an Azure virtual network. Web Apps can also be provisioned with outbound traffic able to reach endpoints in a virtual network, be governed by network security groups or affected by virtual network routes. By default, your app is open to the internet and cannot reach into a virtual network. These aspects can also be changed after the app is provisioned. [Learn more](#)

Enable public access * ☒ On ☐ Off

Basics Database Deployment Networking **Monitor + secure** Tags Review + create

The following features are optional and billed separately. Microsoft recommends enabling them to ensure the most robust protections and capabilities to monitor and secure your web applications.

Application Insights

Azure Monitor application insights is an Application Performance Management (APM) service for developers and DevOps professionals. Enable it below to automatically monitor your application. It will detect performance anomalies, and includes powerful analytics tools to help you diagnose issues and to understand what users actually do with your app. Your bill is based on amount of data used by Application Insights and your data retention settings. [Learn more](#)

[App Insights pricing](#)

Enable Application Insights * ☒ No ☐ Yes

⚠ Application Insights code-less monitoring isn't supported with your selections of subscription, runtime stack, operating system, publish type, region, or resource group. If you want to keep these selections, you can use the Application Insights SDK to monitor your app.

Microsoft Defender for Cloud

When you add the Defender for App Service plan to your Azure subscription, you get a cloud-native security solution that monitors logs, requests, VM instance, and more—detecting threats and ongoing attacks to your resources. [More benefits of Defender for App Service](#)

[Defender for Cloud pricing](#)

ℹ You need permissions to activate Defender for Cloud in this subscription. Contact the owner, contributor, or security administrator.

Tags are name/value pairs that enable you to categorize resources and view consolidated billing by applying the same tag to multiple resources and resource groups.

Note that if you create tags and then change resource settings on other tabs, your tags will be automatically updated.

Here has you can see our application successfully deployed and ready to use

Now go to deployment center you can deploy your code from github

Here in the overview you can see default domain copy that URL

Go to browser and paste and search it your java web application is live now

Hey, Java developers!

Your app service is up and running.
Time to take the next step and deploy your code.

Have your code ready?
Use deployment center to get code published
from your client or setup continuous
deployment.

Deployment Center

Don't have your code yet?
Follow our quickstart guide and you'll
have a full app ready in 5 minutes or
less.

Quickstart

Technical Information

```
java.version: 21.0.6
java.home: C:\Program Files\Java\microsoft-jdk-21.0.6.7
```
