

Install Centos in VMware-28

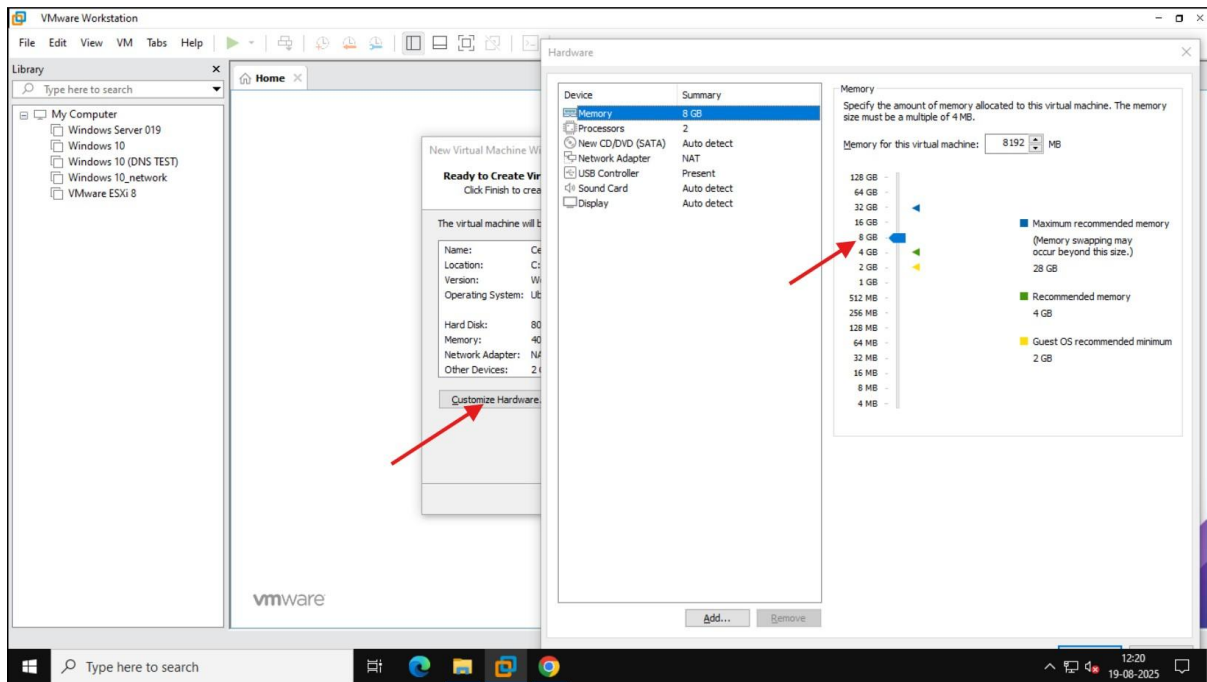

Here in creating a VM in VMware we use typical installation and choose Linux Cent OS and then give a name and leave the location as it is

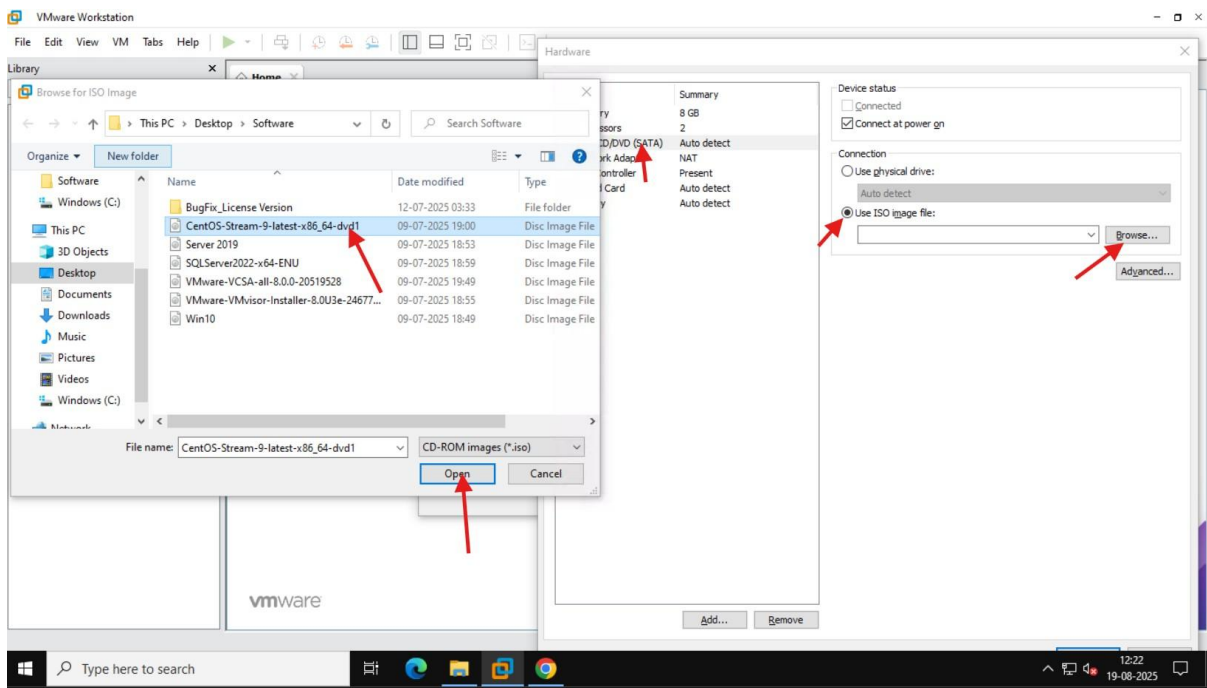

Give appropriate size for Disk and select as single file then next

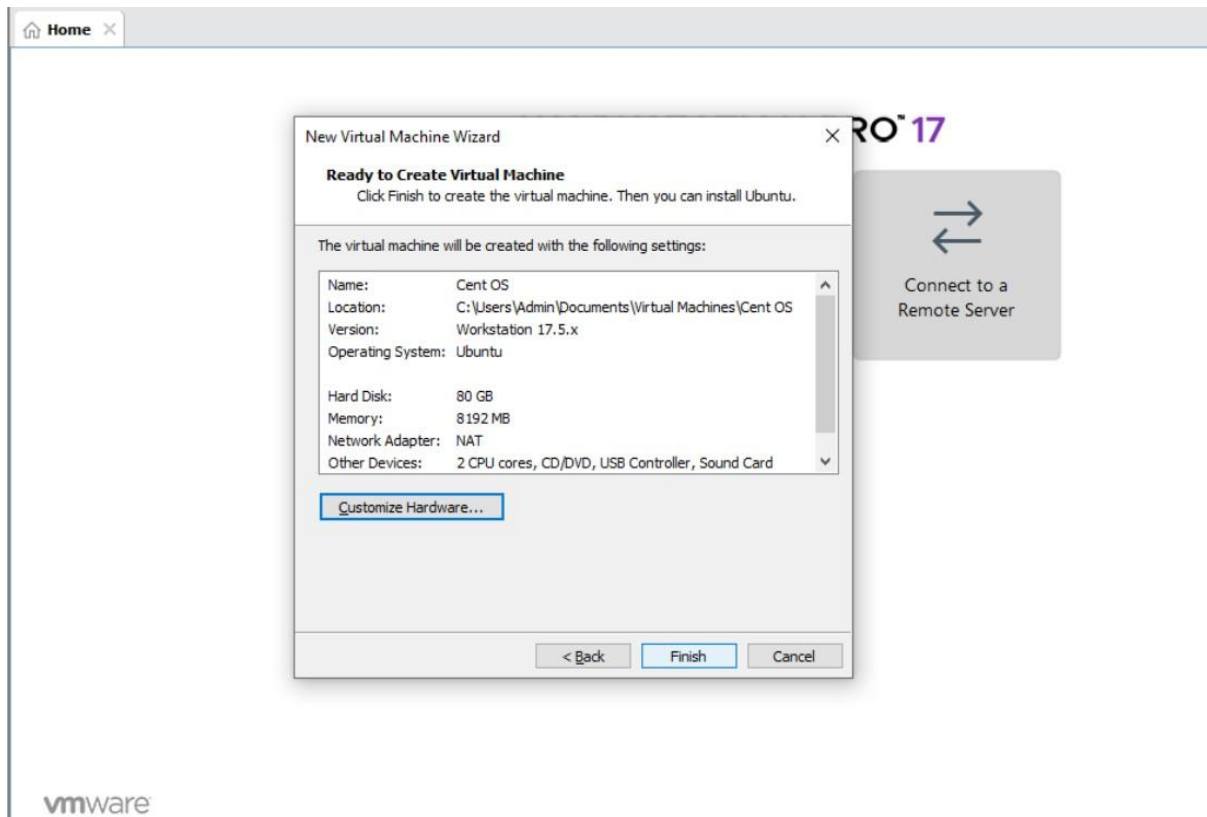

In customize hardware give 8 GB of memory

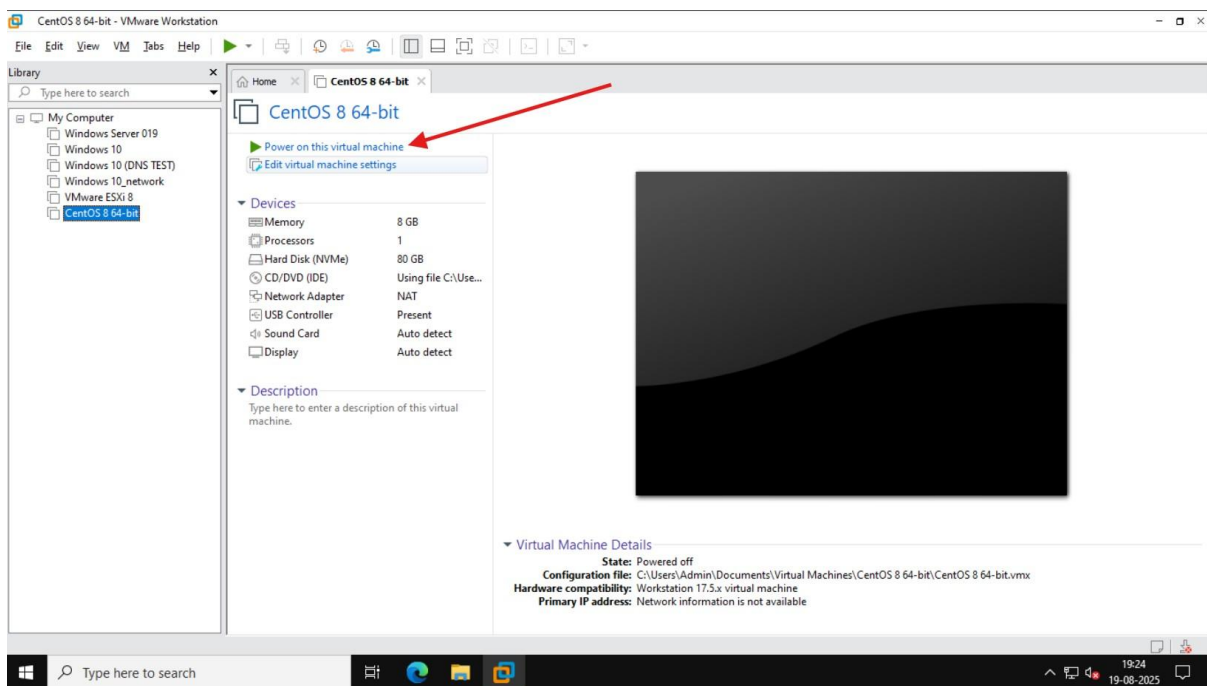

Then in CD/DVD select the Cent OS ISO file we want to install

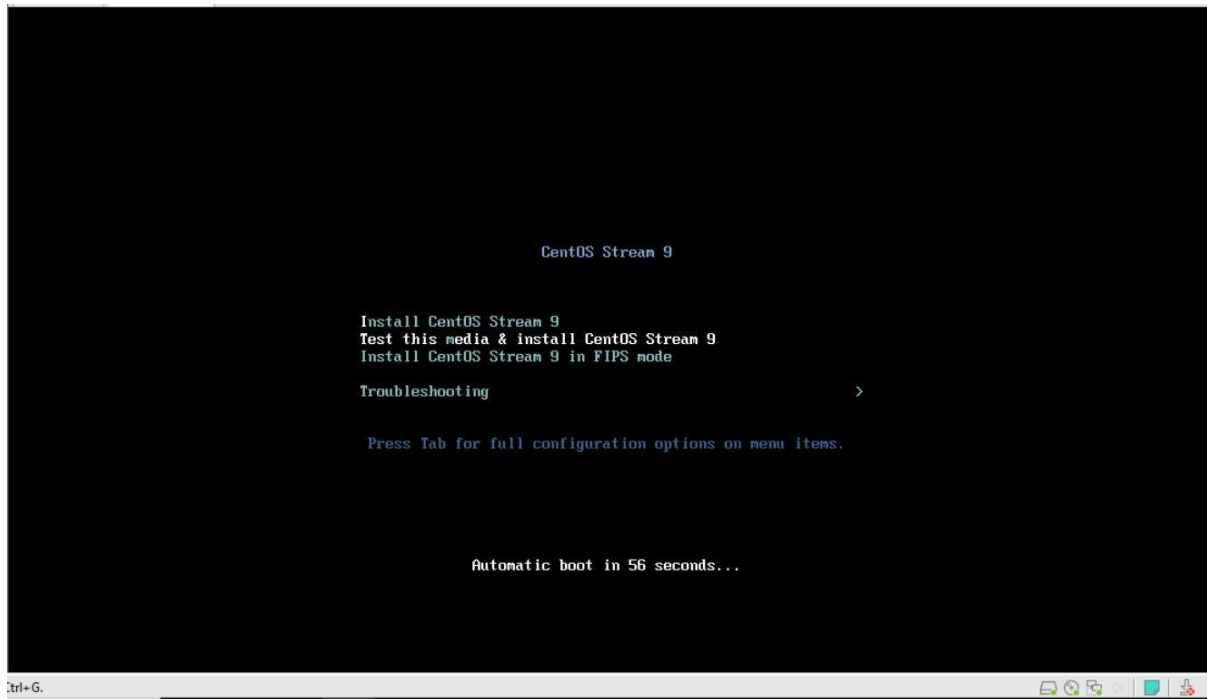

Then click on finish

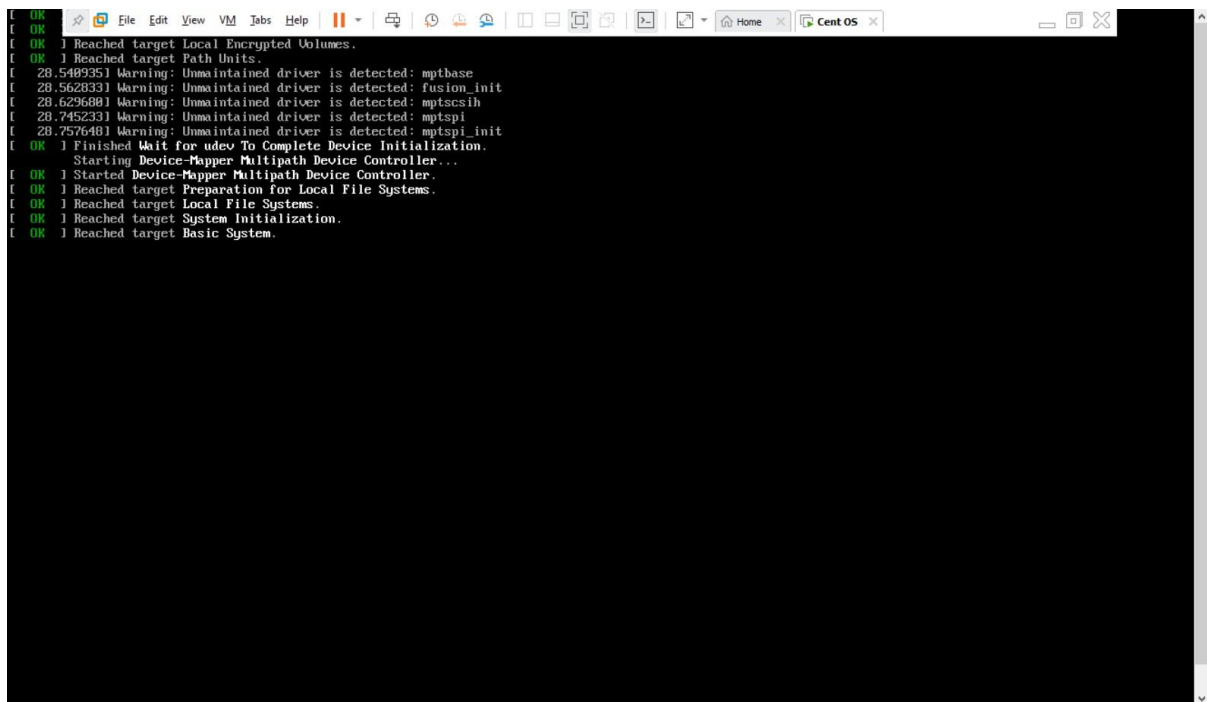

Then power on the VM

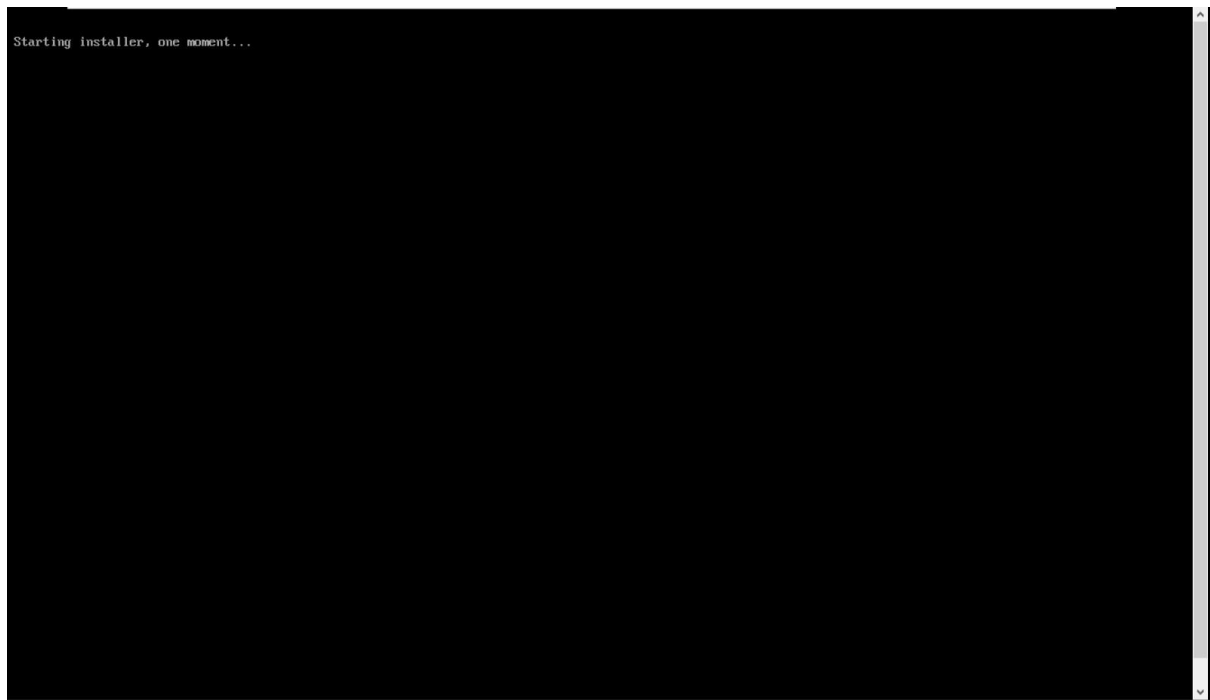

After that you will be given three options choose first one for full installation using arrow keys and hit enter

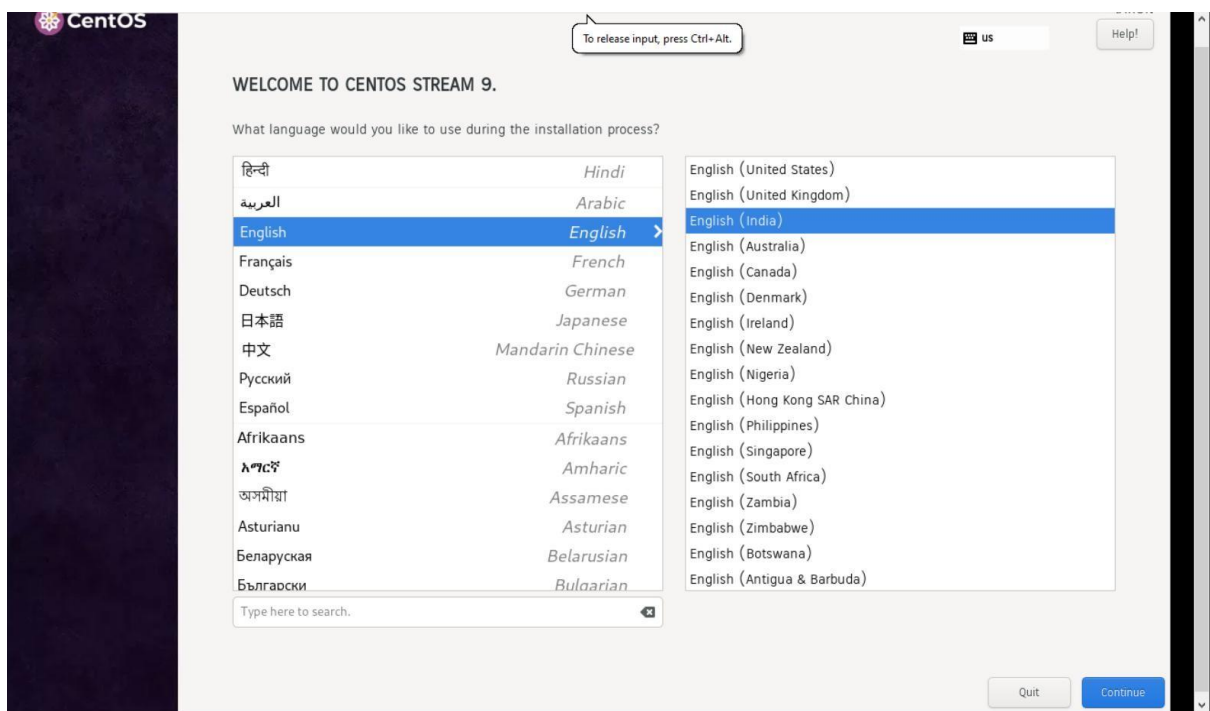

Don't do anything it with load the things required

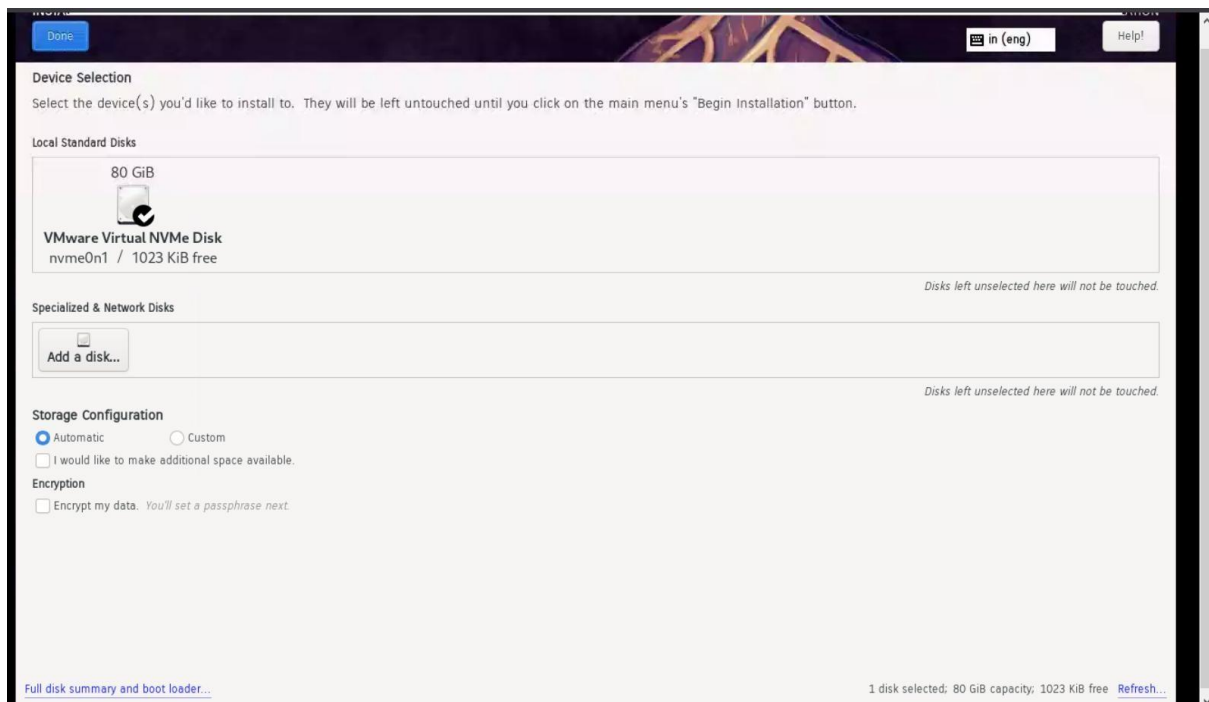

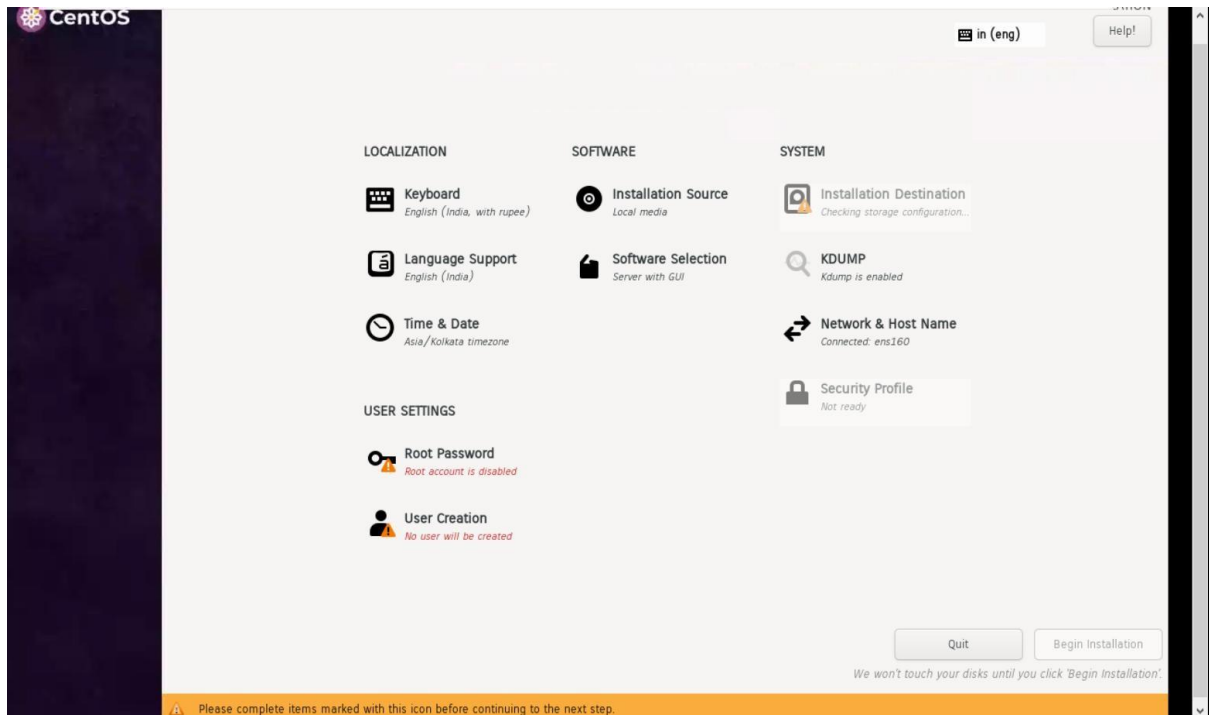

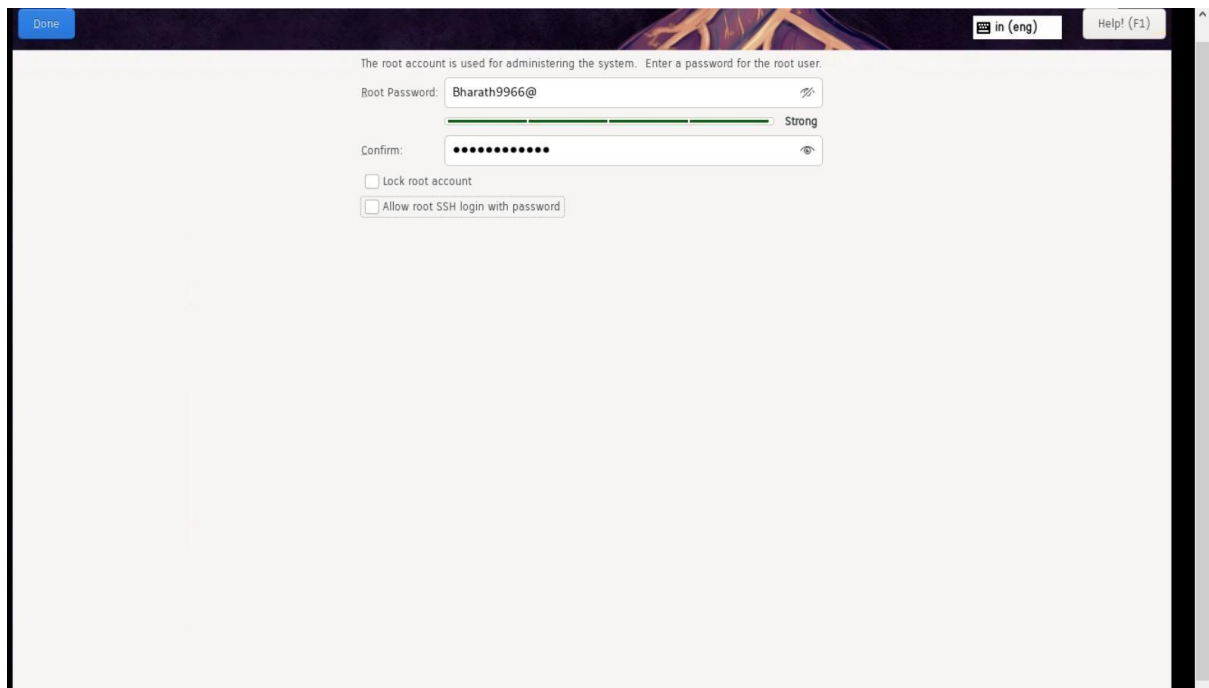

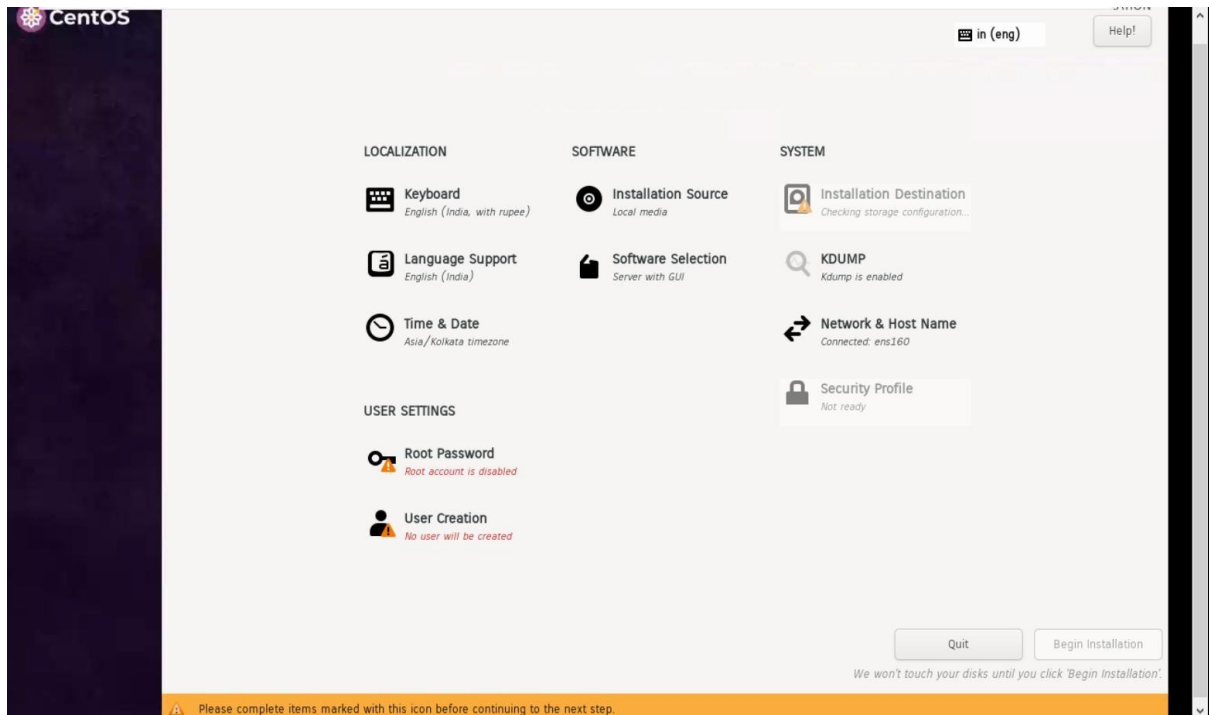

After completion you will be able to choose the language and then continue

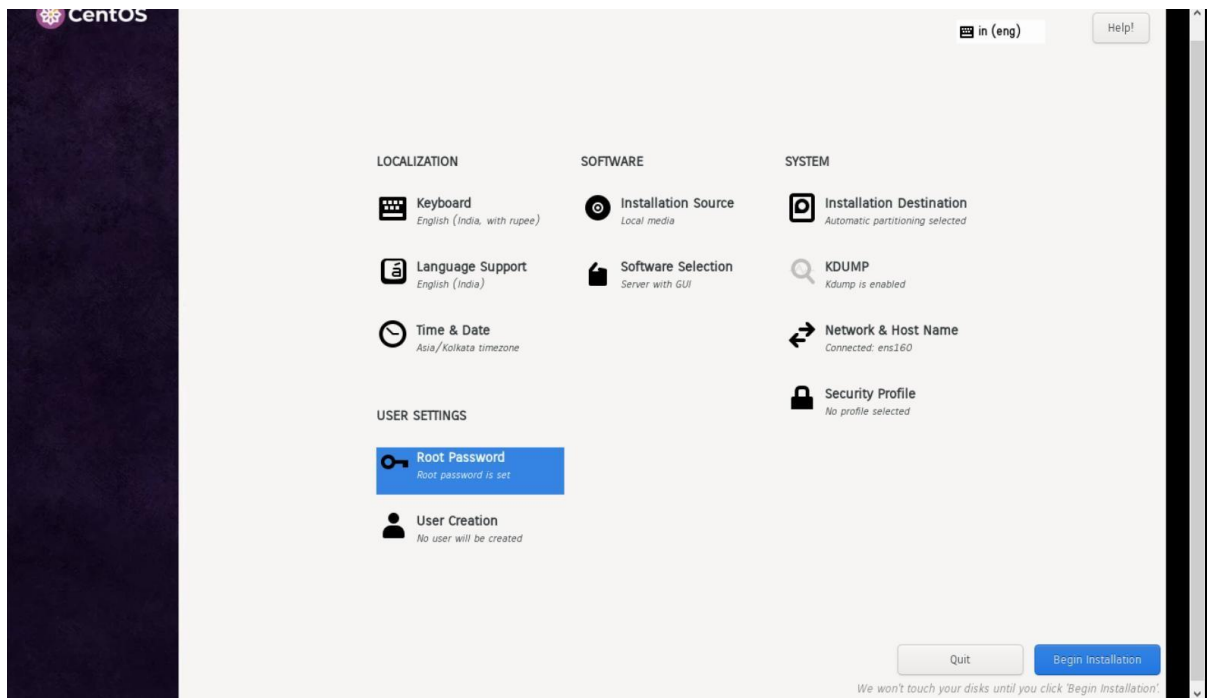

Here click on the installation destination it will automatically select a disk

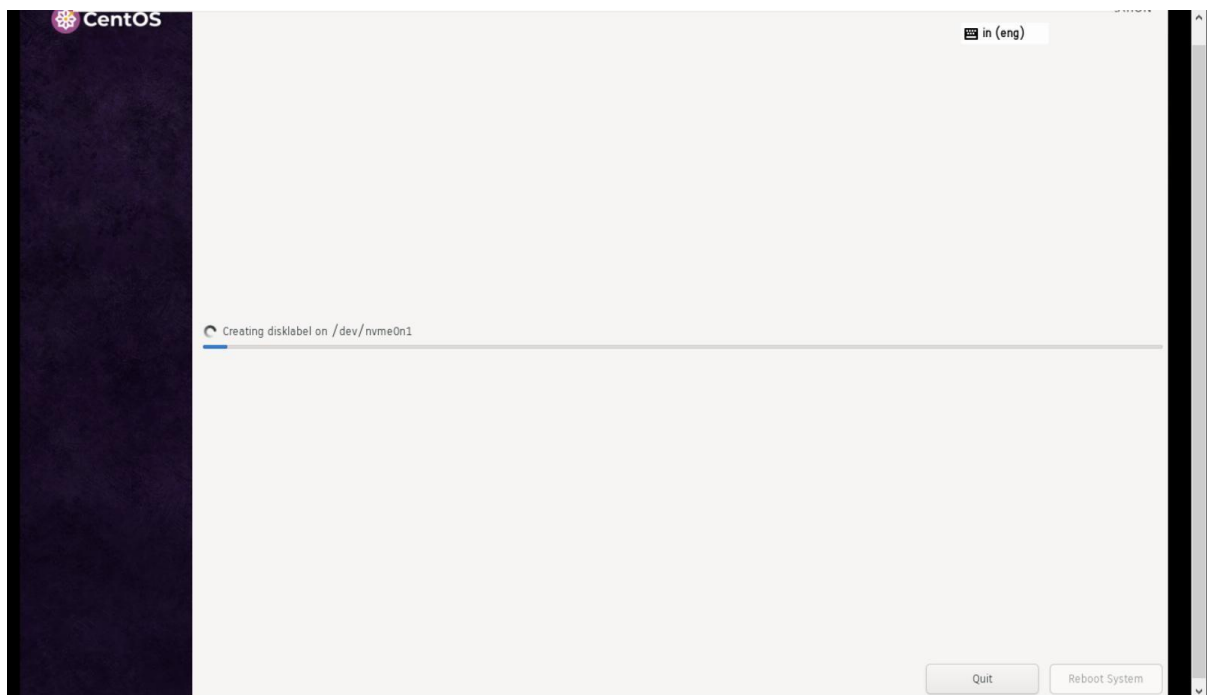

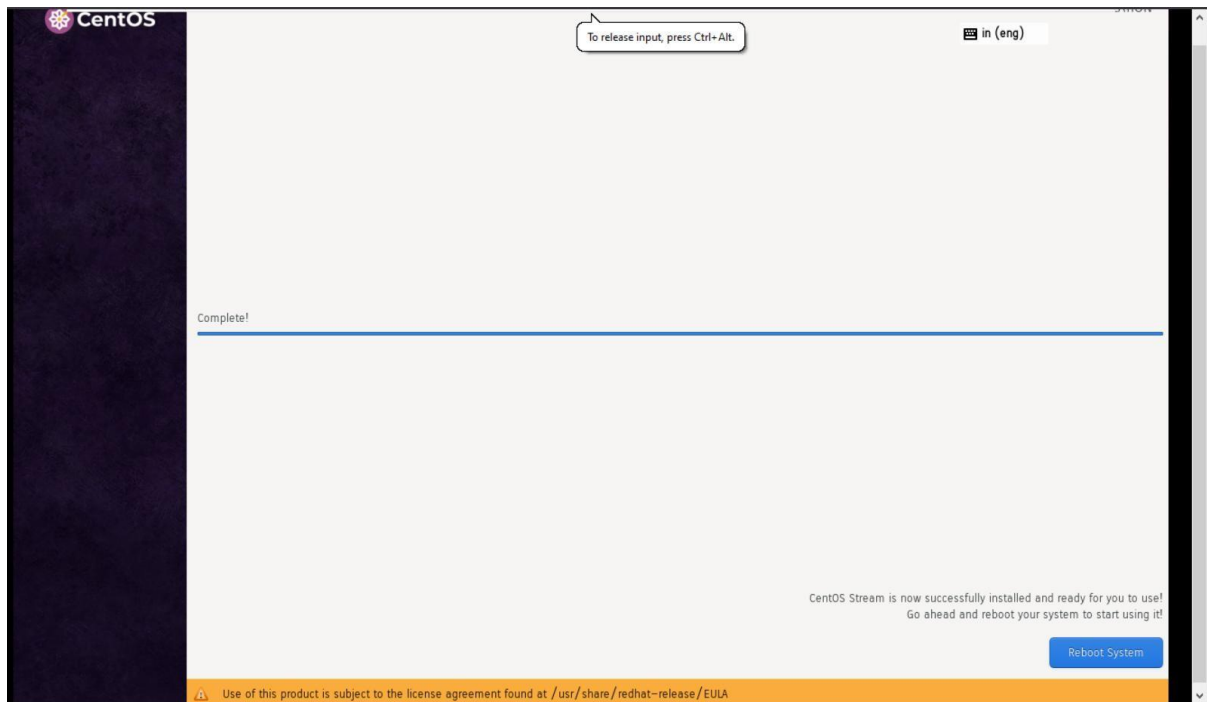

Click on the user and set a password for root user

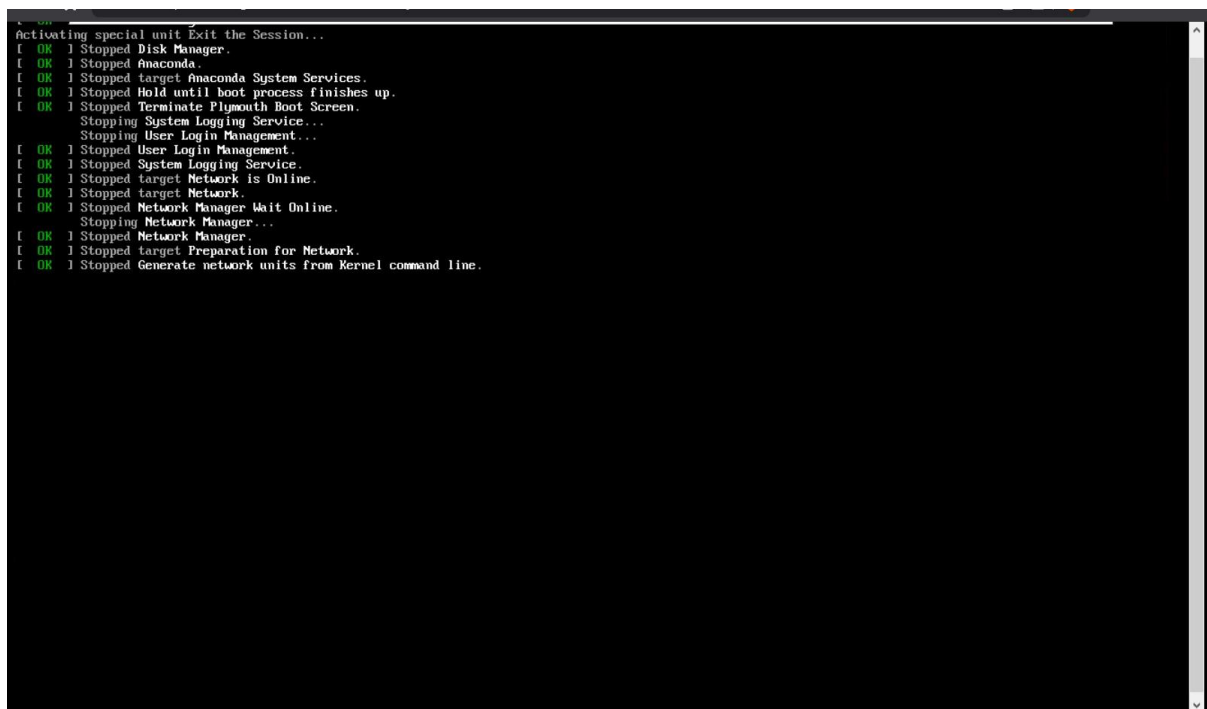

Click on begin installation wait for it to load and configure files it will take around 30 minutes

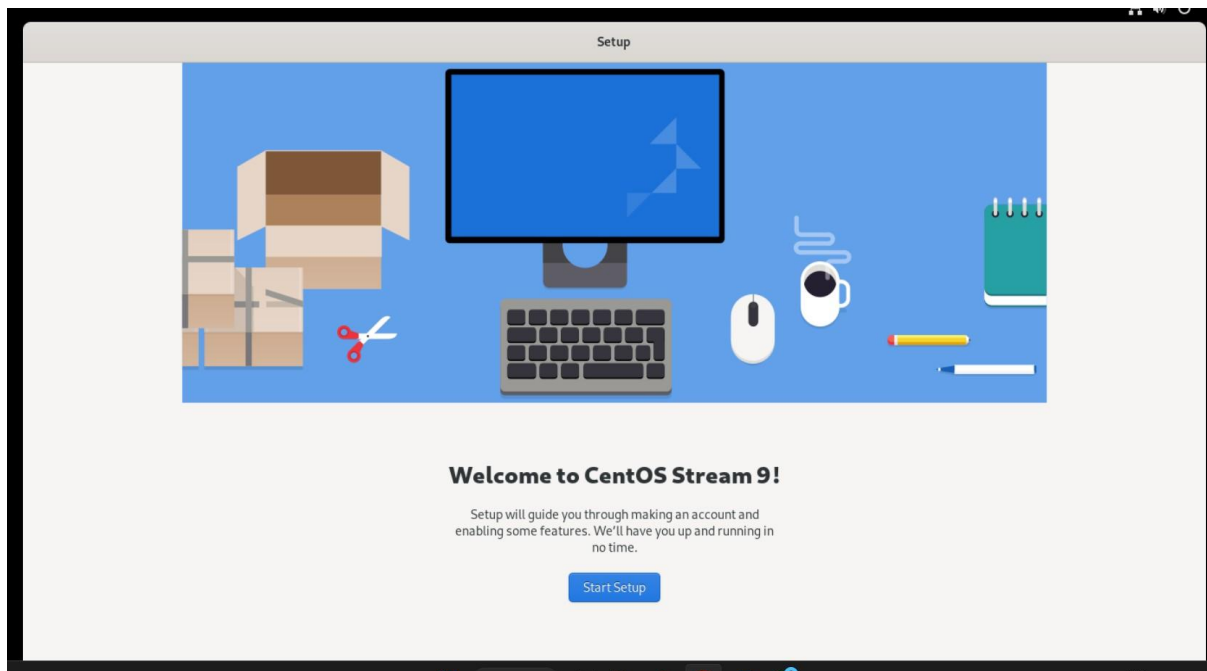

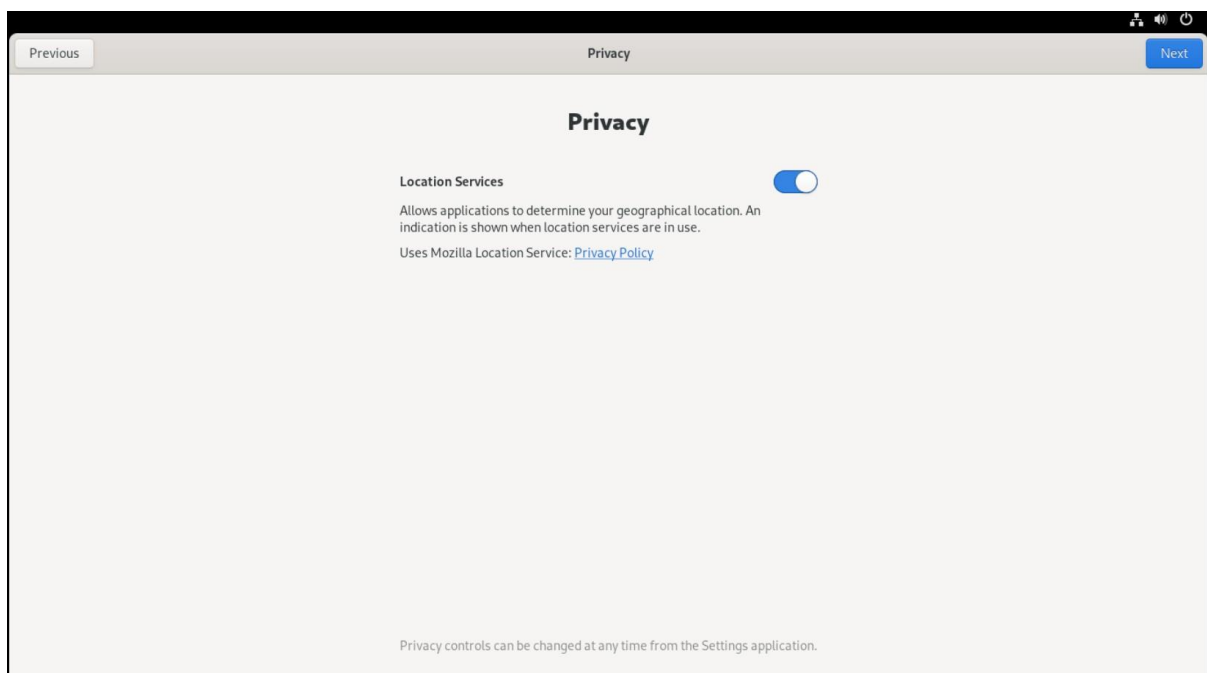

Click on reboot system

You will be greeted with a welcome screen

Give all the necessary permissions and next

Set a display user name for the OS
