After this select postgresql and next

ManageEngine OpManager

Installation in-progress...

OpManager, a robust network monitoring solution, offers comprehensive network monitoring capabilities that help you monitor network performance, detect network faults in real time, troubleshoot errors, and prevent downtime.

Default http and https ports only

ManageEngine OpManager

Port Selection Panel

Enter the Web Server port

OpManager uses 8060 as the default HTTP port and 8061 as the default HTTPS port. If you want to run it on a different port please specify the same here

HTTP Port

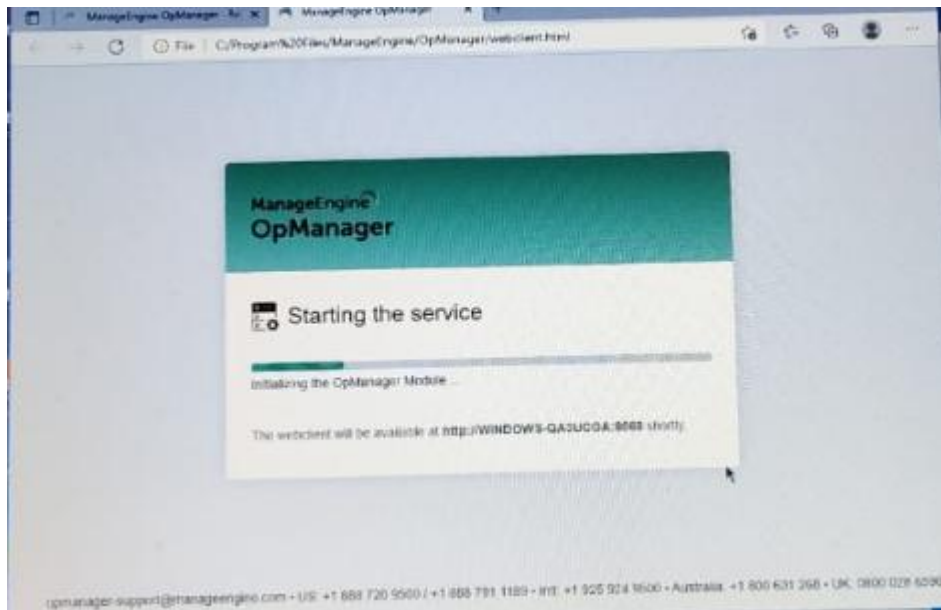

HTTPS Port

Please make sure that the given ports are not blocked by your network's firewall.

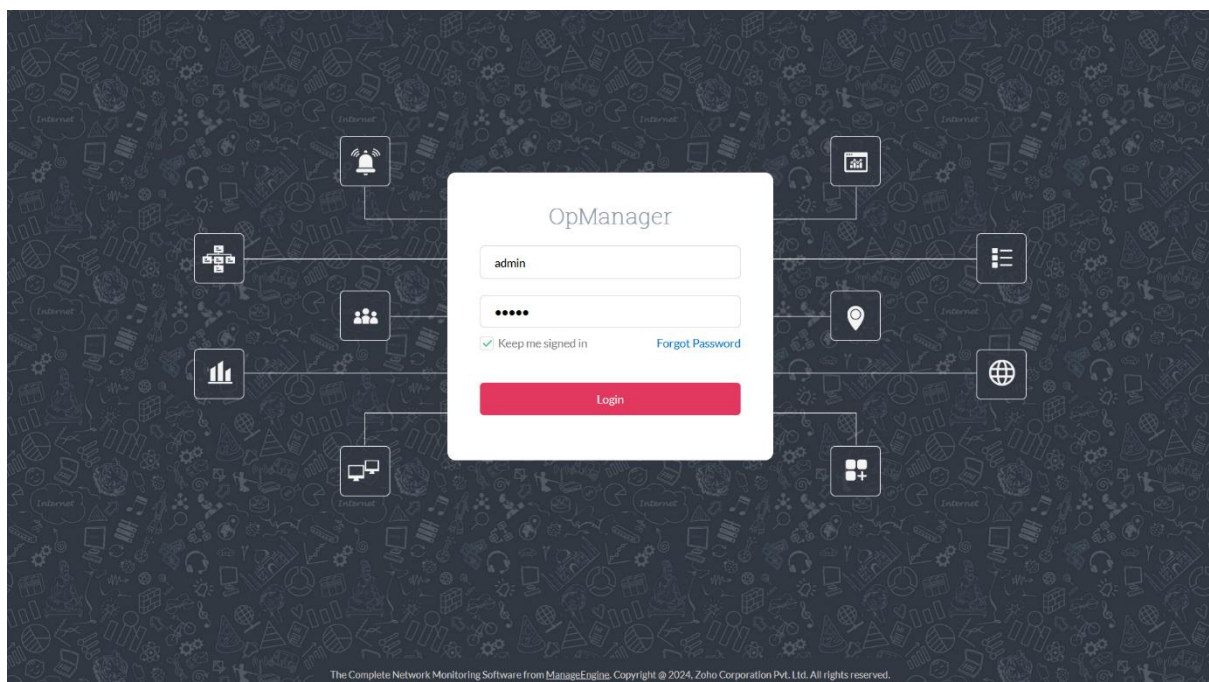

InstallShield

< Back Next > Cancel

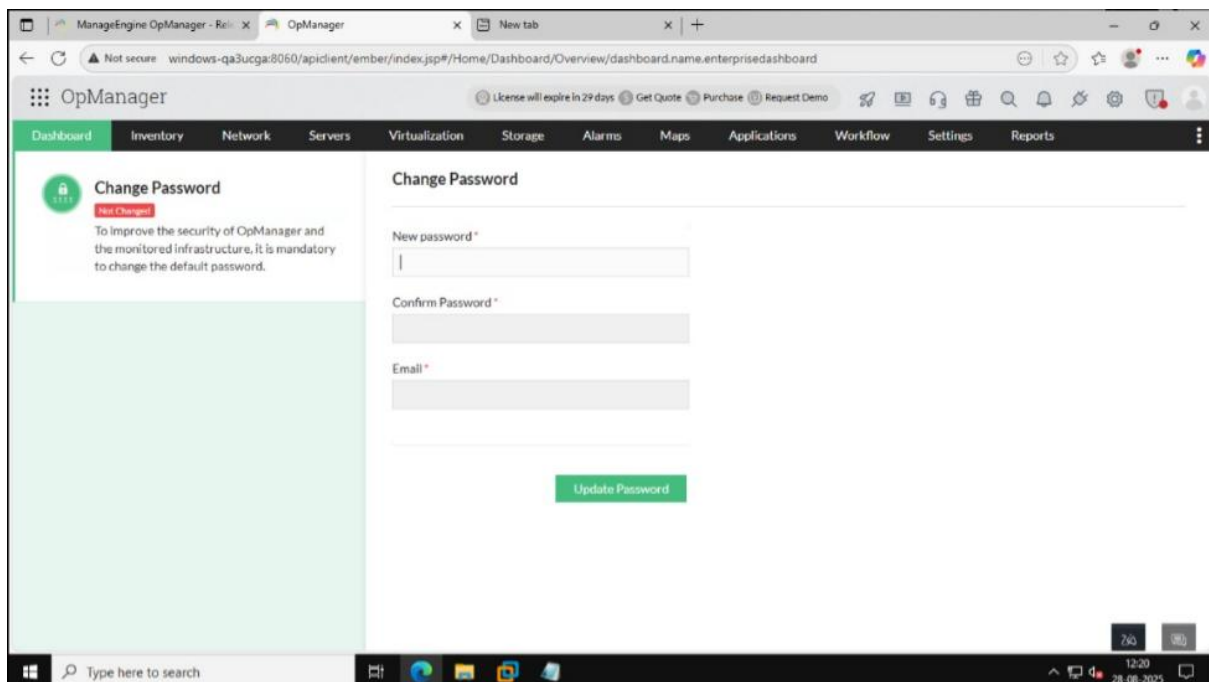

After that it will launch a webpage of opmanager

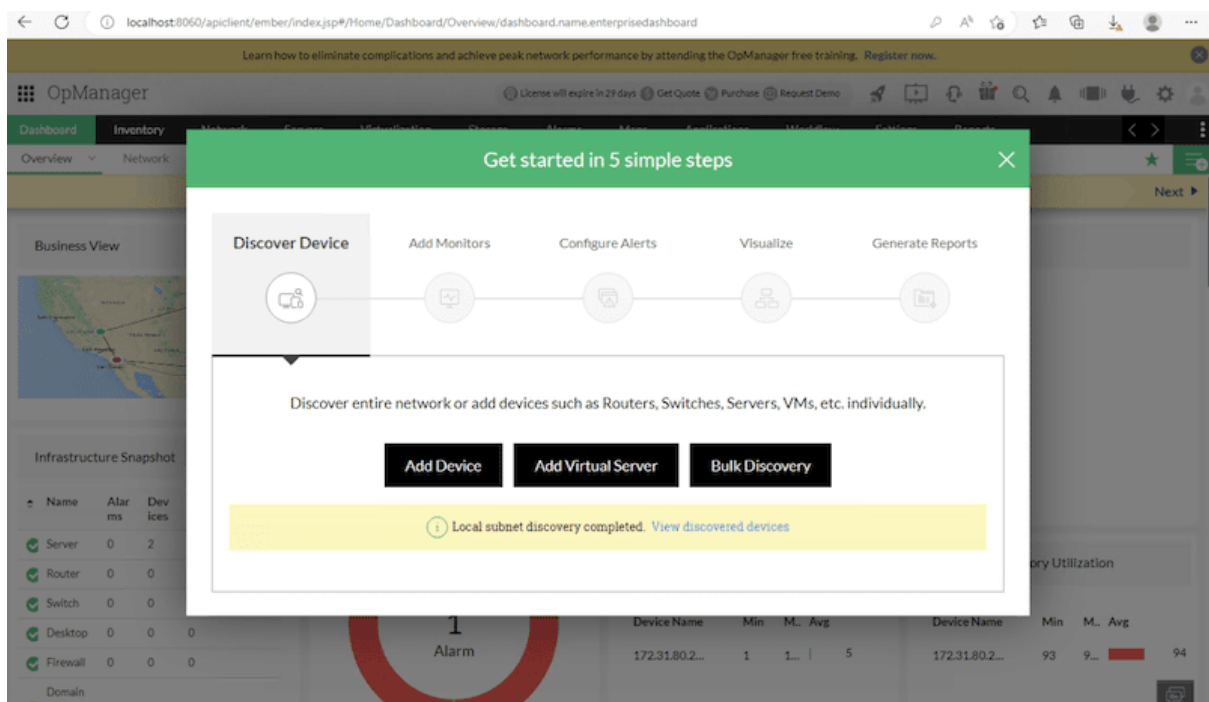

Don't change the password here click on next it will automatically take the password

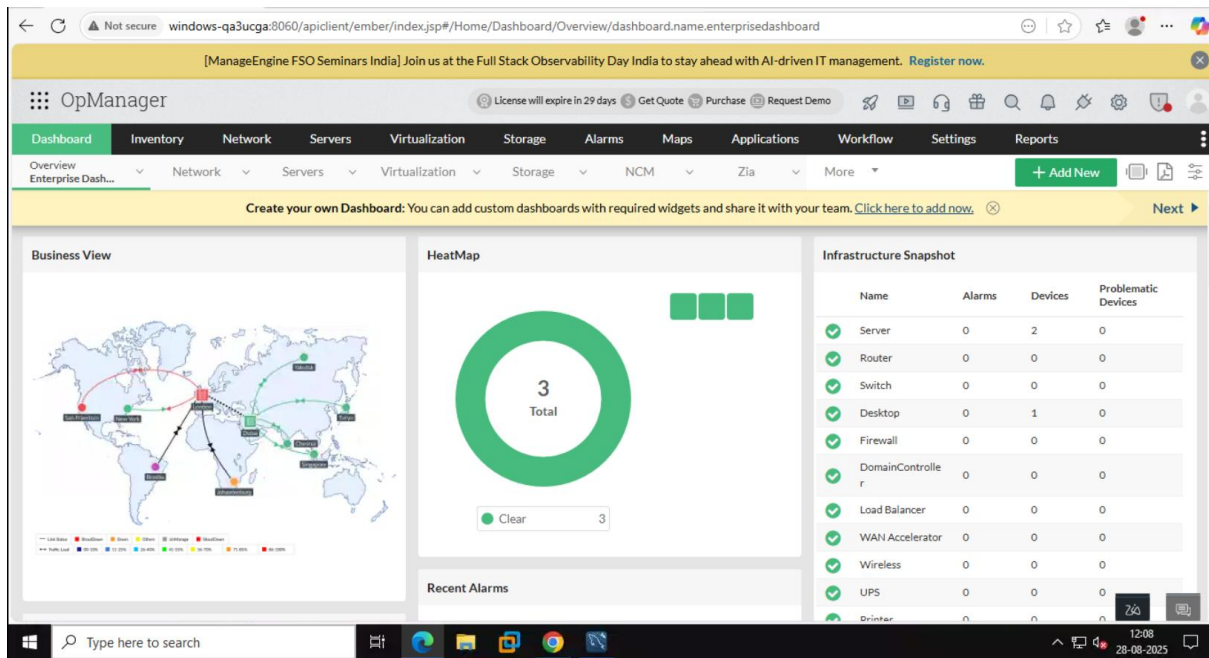

After clicking on login you will be given to change the password change it

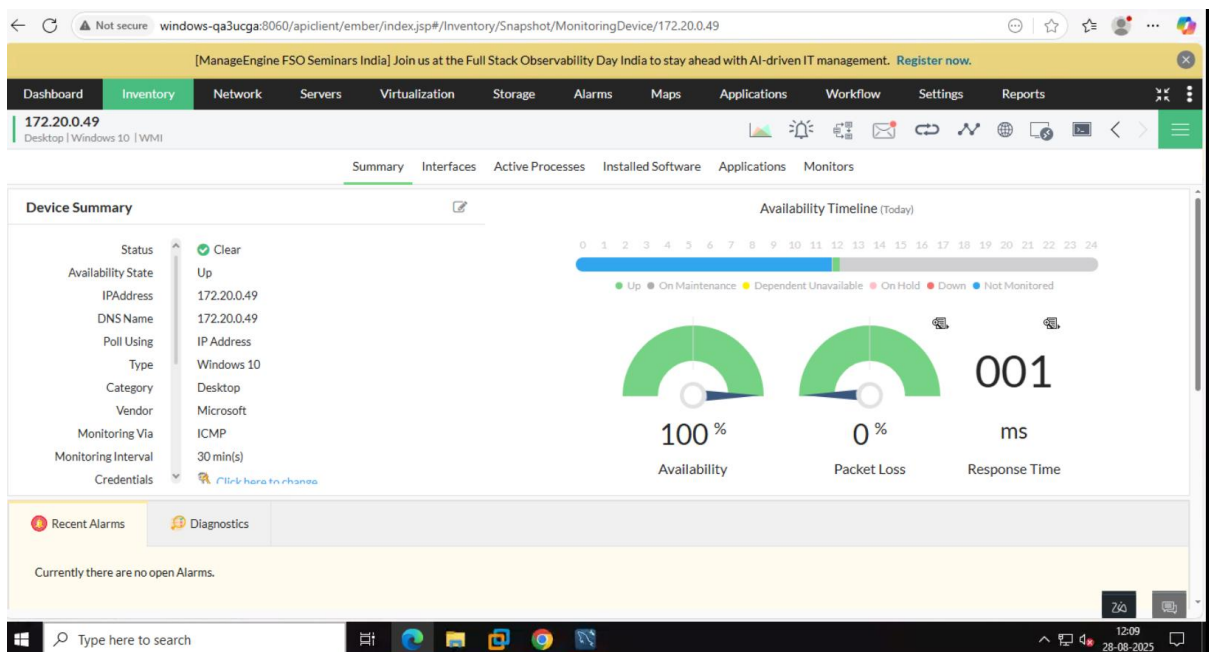

These are some of the get started guides we can skip them

After that the page looks like this we can do anything like manage networks and add them etc

Here we are in the inventory

So yeah this is how you manage Opmanager and managerengine
