

# Install and configure CPUS, Samba-32

## 1.Install and Configure CUPS (Common UNIX Printing System)

Install CUPS package:

```
sudo yum install cups -y
```

Start and enable CUPS service:

```
sudo systemctl start cups
```

```
sudo systemctl enable cups
```

Check service status:

```
sudo systemctl status cups
```

Open firewall port for printing service (631):

```
sudo firewall-cmd --permanent --add-port=631/tcp
```

```
sudo firewall-cmd --reload
```

Edit configuration file if required:

```
sudo nano /etc/cups/cupsd.conf
```

```
bharath@localhost:~$ sudo yum install cups -y

We trust you have received the usual lecture from the local System
Administrator. It usually boils down to these three things:

#1) Respect the privacy of others.
#2) Think before you type.
#3) With great power comes great responsibility.

For security reasons, the password you type will not be visible.

[sudo] password for bharath:
Sorry, try again.
[sudo] password for bharath:
CentOS Stream 10 - BaseOS                    524 kB/s | 6.7 MB    00:13
CentOS Stream 10 - AppStream                  428 kB/s | 3.4 MB    00:08
CentOS Stream 10 - Extras packages            1.6 kB/s | 6.9 kB    00:04
Package cups-1:2.4.10-11.el10.x86_64 is already installed.
Dependencies resolved.
Nothing to do.
Complete!
bharath@localhost:~$ sudo systemctl start cups
bharath@localhost:~$ sudo systemctl enable cups
bharath@localhost:~$ sudo firewall-cmd --permanent --add-port=631/tcp
success
bharath@localhost:~$ sudo firewall-cmd --reload
success
```

Now go to browser search <https://localhost:631> to see

Create a print user:

```
sudo useradd printuser
```

```
sudo passwd printuser
```

Add the user to lp group:

```
sudo usermod -aG lp printuser
```

Restart CUPS to apply changes:

```
sudo systemctl restart cups
```

Give the centos display name and password

```

125 cd
126 sudo yum install cups -y
127 sudo systemctl start cups
128 sudo systemctl enable cups
129 sudo systemctl status cups
130 sudo firewall-cmd --permanent --add-port=631/tcp
131 sudo firewall-cmd --reload
132 sudo systemctl status cups
133 nano /etc/cups/cupsd.conf
134 sudo systemctl stop nginx
135 sudo systemctl start httpd
136 sudo systemctl status httpd
137 sudo user add printuser
138 sudo useradd printuser
139 sudo passwd Admin@12345
140 sudo passwd printuser
141 sudo systemctl restart cups
142 sudo usermod -aG lp printuser
143 sudo systemctl restart cups

```

## 2.Install and Configure Samba

Install Samba packages:

```
sudo yum install samba samba-client samba-common -y
```

Start and enable Samba service:

```
sudo systemctl start smb
```

```
sudo systemctl enable smb
```

```
sudo systemctl status smb
```

Installed:

|                                     |                                               |
|-------------------------------------|-----------------------------------------------|
| libnetapi-4.22.3-101.el10.x86_64    | samba-4.22.3-101.el10.x86_64                  |
| samba-client-4.22.3-101.el10.x86_64 | samba-common-tools-4.22.3-101.el10.x86_64     |
| samba-dcerpc-4.22.3-101.el10.x86_64 | samba-ldb-ldap-modules-4.22.3-101.el10.x86_64 |
| samba-libs-4.22.3-101.el10.x86_64   |                                               |

Complete!

```
bharath@localhost:~$ sudo systemctl start smb
```

```
bharath@localhost:~$ sudo systemctl enable smb
```

```
Created symlink '/etc/systemd/system/multi-user.target.wants/smb.service' → '/usr/lib/systemd/system/smb.service'.
```

Create Samba share directory:

```
sudo mkdir -p /srv/samba/shared
```

```
sudo chmod -R 0777 /srv/samba/shared
```

Add Samba user:

```
sudo useradd sambauser
```

```
sudo smbpasswd -a sambauser
```

Configure firewall for Samba:

```
sudo firewall-cmd --permanent --add-service=samba
```

```
sudo firewall-cmd --reload
```

Edit Samba configuration:

```
sudo nano /etc/samba/smb.conf
```

Add the following:

```
[SharedFolder]
```

```
path = /srv/samba/shared
```

```
writable = yes
```

```
browsable = yes
```

```
guest ok = yes
```

```
read only = no
```

Restart Samba service:

```
sudo systemctl restart smb
```

Test Samba configuration:

```
testparm
```

Verify shared folder:

```
cd /srv/samba/shared
```

```
touch samba.txt
```

```
chmod 777 samba.txt
```

```

148 sudo yum install samba samba-client samba-common -y
149 sudo systemctl start smb
150 sudo systemctl enable smb
151 sudo systemctl status smb
152 cd /etc/samba/
153 cat smb.conf
154 nano smb.conf
155 vi smb.conf
156 nano smb.conf
157 cd
158 sudo mkdir -p /srv/samba/shared
159 sudo chmod -R 0777 /srv/samba/shared/
160 sudo useradd sambauser
161 sudo smbpasswd -a sambauser
162 sudo firewall-cmd --permanent --add-service=samba
163 sudo firewall-cmd --reload
164 sudo systemctl restart smb
165 testparm
166 sudo chmod -R 7777 /srv/samba/shared/
167 sudo systemctl restart smb
168 cd /srv/samba/shared/
169 touch samba.txt
170 ls
171 ls -lh
172 chmod 777 samba.txt
173 ls -lh
174 ls
175 cd ..

```

```

root@localhost:/etc/samba
inherit acls = Yes

[printers]
comment = All Printers
path = /var/tmp
printable = Yes
create mask = 0600
browseable = No

[print$]
comment = Printer Drivers
path = /var/lib/samba/drivers
# printadmin is a local group
write list = printadmin root
force group = printadmin
create mask = 0664
directory mask = 0775

[SharedFolder]

path = /srv/samba/shared
writable = yes
browsable = yes
guest ok = yes
read only = no

[root@localhost samba]#

```

## Execution

```
[bharath9399@localhost samba]$ cd
[bharath9399@localhost ~]$ sudo mkdir -p /srv/samba/shared/
[sudo] password for bharath9399:
[bharath9399@localhost ~]$ ls
Batch8      Bharath    Downloads  Pictures    Public      test.txt
Batch8.txt  Desktop   Music      private.txt script.sh   Videos
'Batch*.txt' Documents  notes.txt  project.txt Templates
[bharath9399@localhost ~]$ sudo chmod -r /srv/samba/shared/
[bharath9399@localhost ~]$ sudo chmod -R 0777 /srv/samba/shared/
[bharath9399@localhost ~]$ sudo useradd sambauser
[bharath9399@localhost ~]$ sudo firewall-cmd --permanent --add-service=samba
success
[bharath9399@localhost ~]$ sudo firewall-cmd --reload
success
[bharath9399@localhost ~]$ sudo systemctl restart smb
```
