

MySQL Query and outputs-48

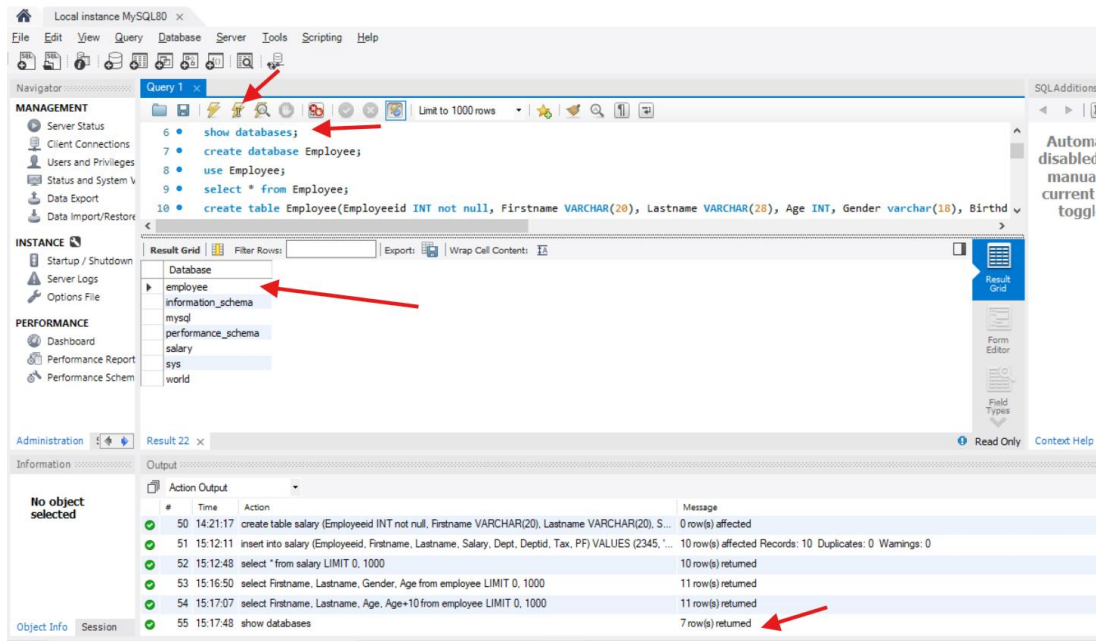

Working with my SQL workbench open it

To see what are

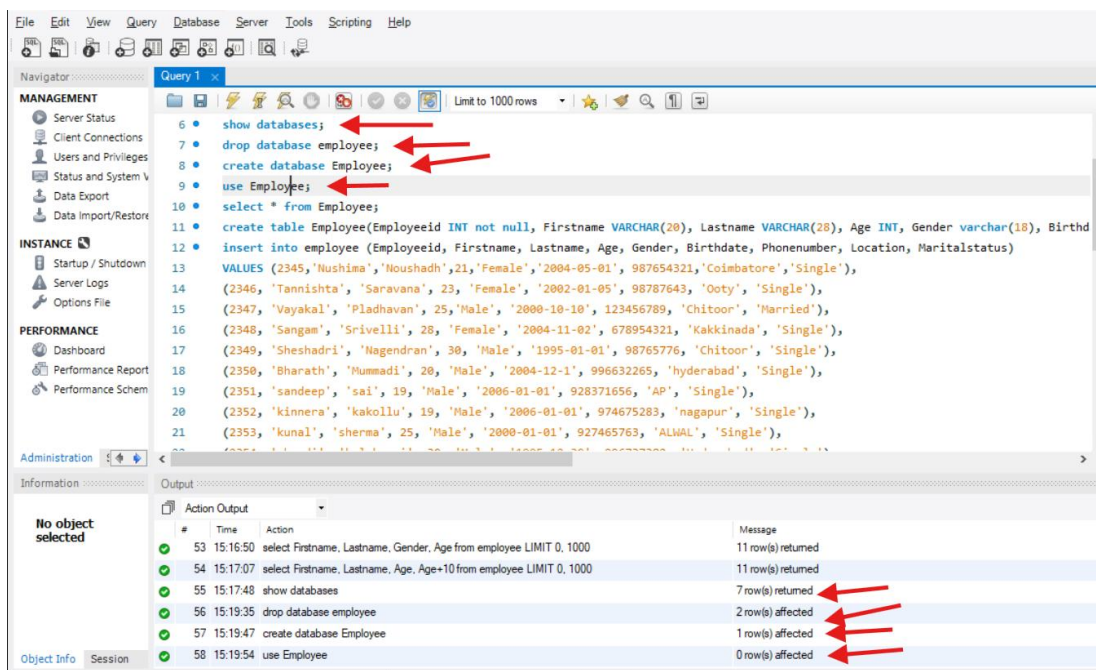

• SQL Basics
• Basic SELECT Statement
• Filtering Data
• Sorting Results
• Restricting Rows
• Using Aliases and Column Customization
• Types of Single-Row Functions
• Transforming Data Output

See what databases are there using this query -> show databases;

We can use -> drop database employee; to remove any other database we don't need

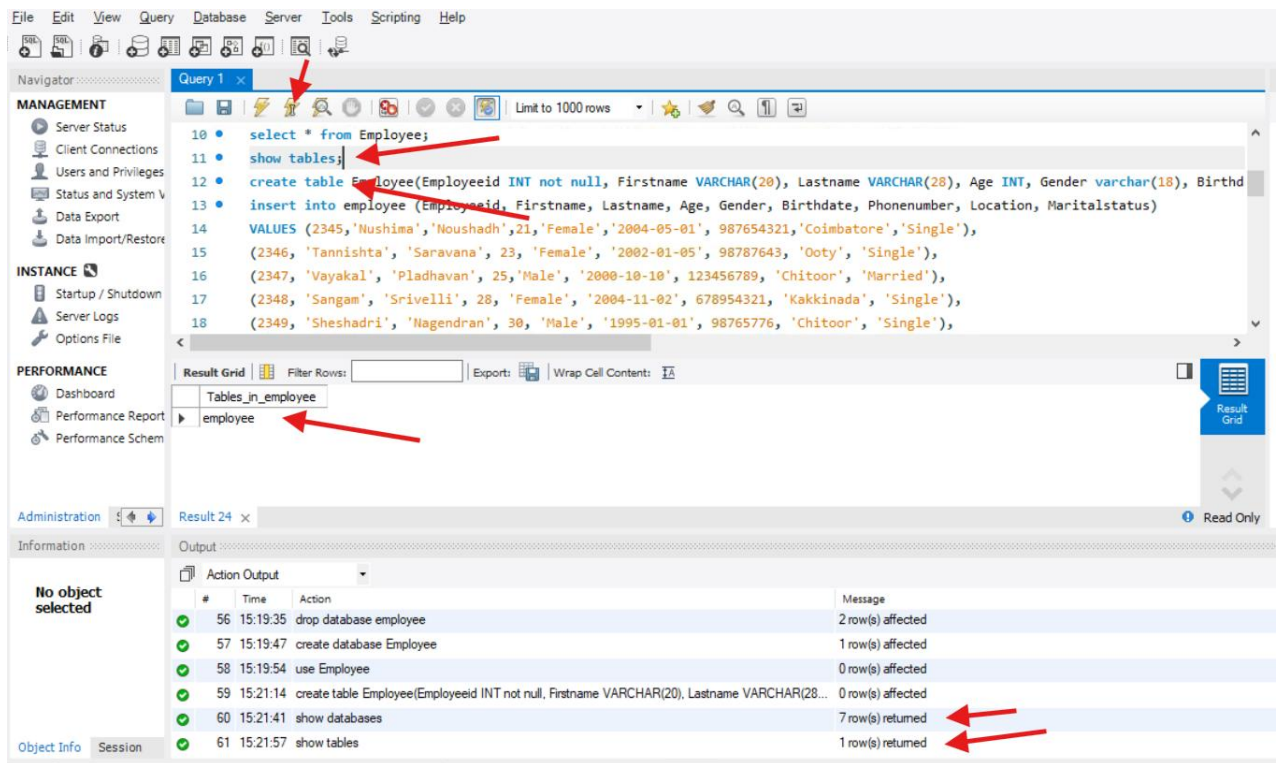

Use -> create database employee;

Then -> use employee; to use it and do anything like create tables drop them

Now create a table using query

create table Employee(Employeeid INT not null, Firstname VARCHAR(20), Lastname VARCHAR(28), Age INT, Gender varchar(18), Birthdate DATE, Phonenum INT, Location varchar(28), Maritalstatus Varchar(10), primary key (Employeeid));

Use this query to insert values ->

insert into employee (Employeeid, Firstname, Lastname, Age, Gender, Birthdate, Phonenumber, Location, Maritalstatus)

VALUES (2345,'Nushima','Noushadh',21,'Female','2004-05-01', 987654321,'Coimbatore','Single'),

(2346, 'Tannishta', 'Saravana', 23, 'Female', '2002-01-05', 98787643, 'Ooty', 'Single'),

(2347, 'Vayakal', 'Pladhavan', 25,'Male', '2000-10-10', 123456789, 'Chitoor', 'Married'),

(2348, 'Sangam', 'Srivelli', 28, 'Female', '2004-11-02', 678954321, 'Kakkinada', 'Single'),

(2349, 'Sheshadri', 'Nagendran', 30, 'Male', '1995-01-01', 98765776, 'Chitoor', 'Single'),

(2350, 'Bharath', 'Mummadi', 20, 'Male', '2004-12-1', 996632265, 'hyderabad', 'Single'),

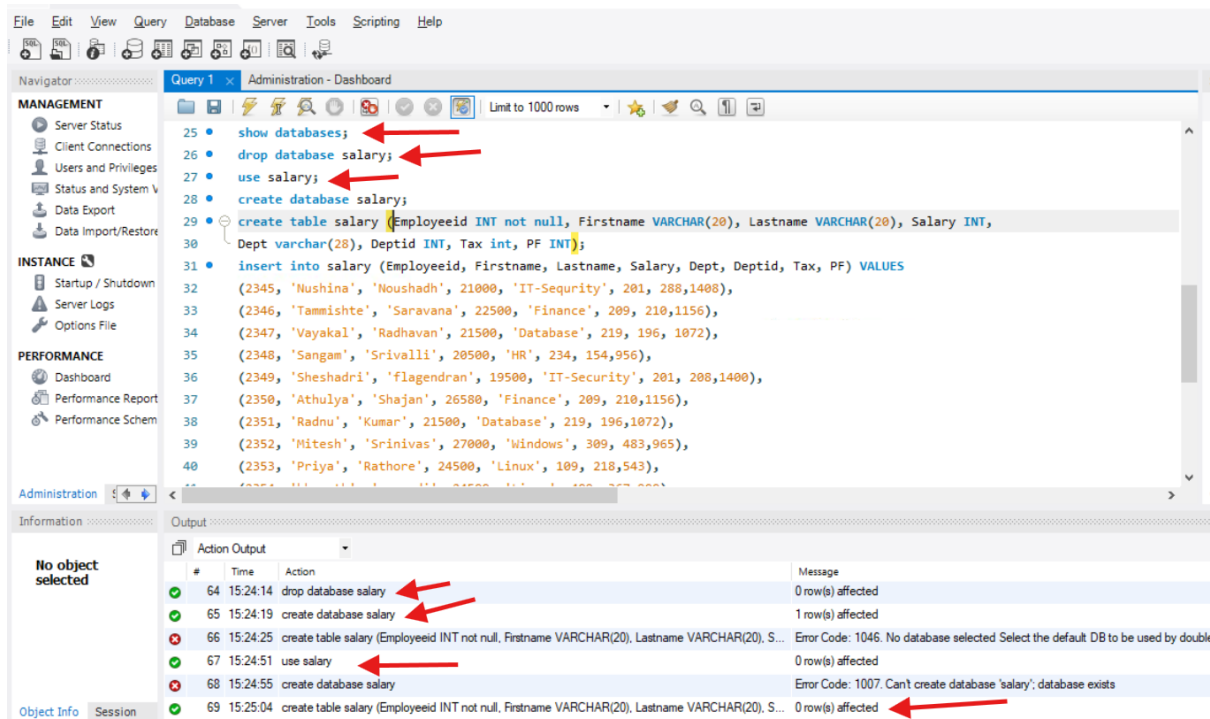

(2351, 'sandeep', 'sai', 19, 'Male', '2006-01-01', 928371656, 'AP', 'Single'),

(2352, 'kinnera', 'kakollu', 19, 'Male', '2006-01-01', 974675283, 'nagapur', 'Single'),

(2353, 'kunal', 'sherma', 25, 'Male', '2000-01-01', 927465763, 'ALWAL', 'Single'),

(2354, 'chandi', 'kulakarni', 30, 'Male', '1995-12-30', 996737382, 'Hyderabad', 'Single'),

(2355, 'vivek', 'amarangabad', 25, 'Male', '2000-05-24', 964364675, 'AP', 'Single');

Now create another database with a table salary using this query->

show databases;

drop database salary;

use salary;

create database salary;

create table salary (Employeeid INT not null, Firstname VARCHAR(20), Lastname VARCHAR(20), Salary INT,Dept varchar(28), Deptid INT, Tax int, PF INT);

And use this query to insert the values in salary ->

insert into salary (Employeeid, Firstname, Lastname, Salary, Dept, Deptid, Tax, PF)
VALUES

(2345, 'Nushina', 'Noushadh', 21000, 'IT-Security', 201, 288,1408),

(2346, 'Tammishte', 'Saravana', 22500, 'Finance', 209, 210,1156),

(2347, 'Vayakal', 'Radhavan', 21500, 'Database', 219, 196, 1072),

(2348, 'Sangam', 'Srivalli', 20500, 'HR', 234, 154,956),

(2349, 'Sheshadri', 'flagendran', 19500, 'IT-Security', 201, 208,1400),

(2350, 'Athulya', 'Shajan', 26580, 'Finance', 209, 210,1156),

(2351, 'Radnu', 'Kumar', 21500, 'Database', 219, 196,1072),

(2352, 'Mitesh', 'Srinivas', 27000, 'Windows', 309, 483,965),

(2353, 'Priya', 'Rathore', 24500, 'Linux', 109, 218,543),

(2354, 'bharath', 'mummadi', 24500, 'Linux', 409, 367,900);

To see the data in the database table use this query ->

select * from salary;

The screenshot shows a database management tool interface. The top menu bar includes File, Edit, View, Query, Database, Server, Tools, Scripting, and Help. The left sidebar has a 'MANAGEMENT' section with options like Server Status, Client Connections, Users and Privileges, Status and System V, Data Export, and Data Import/Restore. Below that is an 'INSTANCE' section with Startup / Shutdown, Server Logs, and Options File. The 'PERFORMANCE' section includes Dashboard, Performance Report, and Performance Schema. The main area displays a query window with the following SQL code:

```
31 insert into salary (Employeeid, Firstname, Lastname, Salary, Dept, Deptid, Tax, PF) VALUES
32 (2345, 'Nushina', 'Noushadh', 21000, 'IT-Security', 201, 288,1408),
33 (2346, 'Tammishte', 'Saravana', 22500, 'Finance', 209, 210,1156),
34 (2347, 'Vayakal', 'Radhavan', 21500, 'Database', 219, 196, 1072),
35 (2348, 'Sangam', 'Srivalli', 20500, 'HR', 234, 154,956),
36 (2349, 'Sheshadri', 'flagendran', 19500, 'IT-Security', 201, 208,1400),
37 (2350, 'Athulya', 'Shajan', 26500, 'Finance', 209, 210,1156),
38 (2351, 'Radnu', 'Kumar', 21500, 'Database', 219, 196,1072),
39 (2352, 'Mitesh', 'Srinivas', 27000, 'Windows', 309, 483,965),
```

Below the query window, a 'Result Grid' shows the following data:

Employeeid	Firstname	Lastname	Salary	Dept	Deptid	Tax	PF
2345	Nushina	Noushadh	21000	IT-Security	201	288	1408
2346	Tammishte	Saravana	22500	Finance	209	210	1156
2347	Vayakal	Radhavan	21500	Database	219	196	1072
2348	Sangam	Srivalli	20500	HR	234	154	956
2349	Sheshadri	flagendran	19500	IT-Security	201	208	1400

The bottom section shows the 'Output' window with the following messages:

#	Time	Action	Message
66	15:24:25	create table salary (Employeeid INT not null, Firstname VARCHAR(20), Lastname VARCHAR(20), S...	Error Code: 1046. No database selected Select the default DB to be used by double
67	15:24:51	use salary	0 row(s) affected
68	15:24:55	create database salary	Error Code: 1007. Can't create database 'salary'; database exists
69	15:25:04	create table salary (Employeeid INT not null, Firstname VARCHAR(20), Lastname VARCHAR(20), S...	0 row(s) affected
70	15:26:30	insert into salary (Employeeid, Firstname, Lastname, Salary, Dept, Deptid, Tax, PF) VALUES (2345, '...	10 row(s) affected Records: 10 Duplicates: 0 Warnings: 0
71	15:26:39	select * from salary LIMIT 0, 1000	10 row(s) returned

Now we'll see some of the queries to manage the data in the tables first one

show databases;

use employee;

select Firstname, Lastname, Gender, Age from employee;

select Firstname, Age from employee order by Age desc;

The screenshot shows the SQL Enterprise Manager interface. The query editor displays a list of queries, with query 52 highlighted: `select Firstname, Age from employee order by Age desc;`. The result grid shows the following data:

Firstname	Age
Sheshadri	30
chandi	30
Sangam	28
Vayakal	25
kunal	25

The output pane shows the execution log with the following entry highlighted:

#	Time	Action	Message
84	15:36:56	select Firstname, Age from employee order by Age desc LIMIT 0, 1000	11 row(s) returned

select Firstname from employee limit 5;

The screenshot shows the SQL Enterprise Manager interface. The query editor displays a list of queries, with query 53 highlighted: `select Firstname from employee limit 5;`. The result grid shows the following data:

Firstname
Nushima
Tannishita
Vayakal
Sangam
Sheshadri

The output pane shows the execution log with the following entry highlighted:

#	Time	Action	Message
86	15:38:00	select Firstname from employee limit 5	5 row(s) returned

Now we see the queries using salary table from salary database using query

use salary;

select Firstname, Deptid, Salary, Dept from salary where Dept='Finance' and (Salary>21000 or Salary <20000);

The screenshot shows the SQL Enterprise Manager interface. The query editor displays a series of SQL statements. The query grid shows the results of the query: select Firstname, Deptid, Salary, Dept from salary where Dept='Finance' and (Salary>21000 or Salary <20000);. The results are as follows:

Firstname	Deptid	Salary	Dept
Tamnishte	209	22500	Finance
Athulya	209	26580	Finance

The output pane shows the execution log, including the query execution time and the number of rows returned (2 row(s) returned).

select * from salary where (Dept='Database' or Dept='HR') and Salary >=20000 and PF>100;

The screenshot shows the SQL Enterprise Manager interface. The query editor displays a series of SQL statements. The query grid shows the results of the query: select * from salary where (Dept='Database' or Dept='HR') and Salary >=20000 and PF>100;. The results are as follows:

Employeeid	Firstname	Lastname	Salary	Dept	Deptid	Tax	PF
2347	Vayakal	Radhavan	21500	Database	219	196	1072
2348	Sangam	Srivalli	20500	HR	234	154	956
2351	Radnu	Kumar	21500	Database	219	196	1072

The output pane shows the execution log, including the query execution time and the number of rows returned (3 row(s) returned).

select Firstname,Lastname,salary from salary where Salary=(Select MAX(Salary) from salary);

The screenshot shows the SQL Enterprise Manager interface. The query editor displays a series of SQL statements. The final statement, highlighted with a red arrow, is: `select Firstname,Lastname,salary from salary where Salary=(Select MAX(Salary) from salary);`. The Results pane shows a single row in the 'Result Grid' with the following data:

Firstname	Lastname	salary
Mitesh	Srinivas	27000

The Output pane shows the execution log. The final action, highlighted with a red arrow, is: `select Firstname,Lastname,salary from salary where Salary=(Select MAX(Salary) from salary) LIMIT 0...` with the message '1 row(s) returned'.

select Firstname, Lastname, salary from salary where Salary > (Select AVG(Salary) from salary);

The screenshot shows the SQL Enterprise Manager interface. The query editor displays a series of SQL statements. The final statement, highlighted with a red arrow, is: `select Firstname, Lastname, salary from salary where Salary > (Select AVG(Salary) from salary);`. The Results pane shows three rows in the 'Result Grid' with the following data:

Firstname	Lastname	salary
Athulya	Shajan	26580
Mitesh	Srinivas	27000
Priya	Rathore	24500

The Output pane shows the execution log. The final action, highlighted with a red arrow, is: `select Firstname, Lastname, salary from salary where Salary > (Select AVG(Salary) from salary) LIMIT 0...` with the message '4 row(s) returned'.

select Salary, count(Salary) as Totalsalary from Salary group by Salary;

Query 1 - Administration - Dashboard

95	15:51:53	select Firstname, count(Firstname) as Totalsalary from Salary group by Firstname LIMIT 0, 1000	10 row(s) returned
96	15:52:59	select Salary, count(Salary) as Totalsalary from Salary group by Salary LIMIT 0, 1000	8 row(s) returned
97	15:55:46	select SUM(salary) from salary LIMIT 0, 1000	1 row(s) returned

select Min(salary) from salary;

The screenshot shows the SQL Enterprise Manager interface. The left pane displays the 'MANAGEMENT' tree with 'Server Status' selected. The main pane shows a query editor with the following SQL code:

```
56 • select * from salary where (Dept='Database' or Dept='HR') and Salary >=20000 and PF>100;  
57 • select Firstname,Lastname,salary from salary where Salary=(Select MAX(Salary) from salary);  
58 • select Firstname, Lastname, salary from salary where Salary > (Select AVG(Salary) from salary);  
59 • select Firstname, count(Firstname) as Totalsalary from Salary group by Firstname;  
60 • select Salary, count(Salary) as Totalsalary from Salary group by Salary;  
61  
62 • select SUM(salary) from salary;  
63 • select Min(salary) from salary;
```

Below the query editor, the 'Result Grid' shows the results of the last query (Min(salary)). The grid has two columns: 'Min(salary)' and '19500'. A red arrow points to the '19500' value.

The bottom pane shows the 'Output' window with the following table:

#	Time	Action	Message
93	15:50:12	select Firstname, Lastname, salary from salary where Salary > (Select AVG(Salary) from salary) LIM...	4 row(s) returned
94	15:51:15	select Firstname, Count (Firstname) as Totalsalary from Salary group by Firstname LIMIT 0, 1000	Error Code: 1630. FUNCTION salary.Count does not exist. Check the Function Name
95	15:51:53	select Firstname, count(Firstname) as Totalsalary from Salary group by Firstname LIMIT 0, 1000	10 row(s) returned
96	15:52:59	select Salary, count(Salary) as Totalsalary from Salary group by Salary LIMIT 0, 1000	8 row(s) returned
97	15:55:46	select SUM(salary) from salary LIMIT 0, 1000	1 row(s) returned
98	15:56:41	select Min(salary) from salary LIMIT 0, 1000	1 row(s) returned

A red arrow points to the last row of the output table.

show databases;

use employee;

select Firstname, Gender,Location from employee where Maritalstatus='Single' and Location='Chitoor' or Gender='Male';
